What's the question exactly? If it gets reported enough, I am sure that it will be taken down. That's dependent on the site of course.

piratebay, 133x.to, limetorrent

I bet people prefer direct downloads or streaming

I don't believe you're allowed to link him to anything like that in a post.

Bind it to some porn and upload on mega. Leave links in postbin, post the download on a file sharing forums/site, even reddit works... People are on there asking for files left and right.

How do you bind exe into porn videos?

Do you know some EK developers for this?

Thanks

You would need lot of seeders to rank up your files.
