Depending on the your password/combo list you can either hack random accounts or target a specific account

Yes which I do. The list I provide includes email:password combo to hack random accounts. If you

want to target a specific person you put in the email of that specific person

Yes basically in the combo/password lost you will just need to make all the emails on the list that one email, so it attempts to only hack that one account rather than a bunch of random accounts

I don't think so, unless there's a page linked to an account? I'm not really sure how Facebook pages work but is it connected to a Facebook account or the page is technically it's own account?

Hi, I've read previous questions on this thread but I still wanna ask and I'm hoping to get the answer I want

You said we can hack specific accounts given we have the email address of the user

If we do is it guaranteed we'll have access to the account? My sister in law wanna spy on his husband's

account who is working abroad. Will this tool help me? This looks promising really.

Also, will you provide proxies? I already read that you will provide password list.

And if it's possible that I just give you the email of the person to hack then I'll commission you without

having to buy this tool as I really only need to get access on that specific account. Hope to hear from you thanks

You must put only their email in the combo list

You get a combo list and proxies which you load onto the program. Run the program and let the
accounts roll in

Does this work with actual accounts we want to obtain? Or does it just work for random accounts? I've bought something similar to this in the past, and it wasn't even able to obtain my information when I provided the correct information in the combolist. lol

Yes if you want to target a certain account you will need to find the email of the target

It doesn't matter if it's a good proxy or not if it's in the different country from your target. Paid proxy lists telling you the location is the best way to go normally not too pricey. If you buy this product of Stoned it comes with a proxy list ? huge voucher for Stoned too

Yeah if you're looking to target a specific account then you need their email connected to their Facebook account

I've been trying to figure the same thing out. So far, the only "hacking" I've been able to do with this tool is when I personally know the exact password, and put it in a combo list. I've yet to see anything else be successful, so I am either doing something wrong.. or.... this doesn't work like it says.

I'm interested in buying this but I'm hoping you or somebody could teach me the in and outs of this program and things related to this. I would be very grateful and willing to pay extra for the 'lessons'. If I know somebody's email am I able to gain access to their passwords or do I need to do something related to guessing it and it'll find it or something?

Hello Stone,

I just want to hack a specific account, so this was what I did:
I put the targeted email in the "combo list"
what do I supposed to put in the proxy list?
I tried with your proxy list --> nothing came out
I tried with "no proxy" checked --> nothing came out
Please help!

So far, the only "hacking" I've been able to do with this tool is when I personally know the exact password, and put it in a combo list. ferdinandar - January 7, 2019, 3:25 pm

Please note this is a brute force application through a series of 10,000 password suggestions. It only takes 5 minutes if you have a document with the exact password which is rather impossible in reality. Stoned, please also respond to DM.

Ok got it thanks so firstable scanning is stacking on some records when you remove this record from the list is fine and is few of them second think how combo list is made username:password? And is that trying to match only this one? Third think I was trying to put email address into the list but I'm doing something wrong because it won't work. The last think some of the passwords has been found but in right box appear only first part from the combo list (nickname)?

Can you advise me in PM and explain how to do it please.

Guys,

Keep in mind 4 eva!!!

There is no exist any soft to crack facebook instantly. Dont be naive pls!!! Dont spend any bucks on tools like this who doesnt work!!!

Facebook can be cracked by api, graph.facebook.com, <https://developers.facebook.com/>.

By phising. Search shellphish on kali.

Or if you know very very good Python to create a python to suck that pwd from your friends.

But nobody will put their creation at free on the market. Will be sirious damages!!! Imagine that!

Funny how OP ignored me with the huge offer I came up with, this tool will not help you hacking a FB account since getting the password is one step but the hardest step is to bypass the 2fa where u will lock the account straight away when you log in with a different ip.
