Thread: [Is there a way to always have explorer.exe and browser process to highest priority?](#)

Account of the Gods - July 4, 2018, 4:14 am

My pc is so fast when i change explorer priority to super high LOL.

like if I had an SSD! but i dont have it.

I think of changing browser like that too. these are my main programs.

But its annoying always doing it manually.

How can I set it to always launch with super high priority?

Maybe you can code a program that automatically makes's it the highest priority? That would probably be the best option

CyberStrike - July 4, 2018, 7:14 am

wmic process where name="explorer.exe" CALL setpriority 128

Priority:

idle: 64 (or "idle")

below normal: 16384 (or "below normal")

normal: 32 (or "normal")

above normal: 32768 (or "above normal")

high priority: 128 (or "high priority")
real time: 256 (or "realtime")

normal: 32 (or "normal")
above normal: 32768 (or "above normal")
high priority: 128 (or "high priority")
real time: 256 (or "realtime")
what do you mean by "wmic process"?

also is this permanent?

oh i know what you mean, but that wont work for explorer.exe

CyberStrike - July 4, 2018, 11:09 am

Wouldn't explorer already be a high priority, it's a pretty integral part of Windows? Also using process hacker you can keep it permanent.

<https://www.raymond.cc/blog/permanently-set-process-priority-in-windows-task-manager-with-prio/>

For something like a browser I'd think you can probably just use a powershell script which starts the process and sets the priority.

Charger - July 4, 2018, 11:14 am

Just don't set anything to real time unless you want a BSOD.

i know ;) sometimes i set moving large folders (so explorer.exe) for realtime and i mean folders. 60gb+

speeds up significantly.

but i rarely do it on realtime as if i remember well i had a bsod on it on old pc. i set everything to very high now

btw process hacker worked amazing ;> ty
