Thread: [Rezzex \(UID=2652362\) Editing chat logs, his file UD, harrashing for no reason!](#)

Hafgufa - July 4, 2018, 10:55 am

Let me start out with this, user (his profile link:

<https://hackforums.net/member.php?action=profile&uid=2652362>),

He contacted me to buy bots and i gave him a fair warning on that i never seen betabot not being detected runtime.

He then posts on my thread all kind of things like he didnt get what he paid for, it's not my fault that his stub is detected and he got a bad execution rate.

He then starts trying to "teach me" about hashing, encryption etc. and how his botnet is working after i told him that his not correct.

User will harrash your thread if he don't get his wish and its his own fault, never deal with this kid.

Dude don't understand how MD5 is working and think that betabot use base64 (encoding) LMFAO.

He posted this on my partners thread:

Quote:I had bought 200 EU/US LOADS and he told me I will get 50 free mixed LOADS.

All I got was 42 that are mostly tier 2-3 and probably 10 Tier 1 Bots. (15m after executing online rate went down to 20 bots)

First he tells me i did not ever have had any good loads like "his". But he binding it with a Windows Activator (7,8 ?), he first told me its a Windows 7 Activator then again he told me they all have Windows Defender and that my File is not runtime fud on this AV (yes thats prob. true), but since when has Windows 7 Defender installed it by default? Never.

Then he recalls and tells me its a Windows 8 Loader, but out of the 43 Bots I got 40 where Windows 7 bots, why would they use a Windows 8 Activator?

Also on the Chat he multiple times tries to get as much Information out of my botnet thats possible, never had that on any bot seller hmm...

He also tells me about his 5 certifications in cyber security and 5 years in software construction frequently while we were chatting seems really professional then again he did not even know how to a "JOIN" in SQL, awkward isnt it? (he tells me hashing and encrypting is the same haha)

But then again his Threads are telling me different

My reply:

Well first of all, he lied all the way through. He couldn't operate a simple SQL database, trying to tell me that they have a table with rows only containing IDs and they are being fetched through "JOIN", well goodluck with that. Read the pastebin in the bottom of the post and yes, i have 5 certifications and 5 years in software construction, while i ran my coding service i mentioned that in my resume aswell.

This guy uses Betabot and his bin is UD runtime, it's one of the worst bots in history of mankind and even Windows Defender can detect it in runtime.

The guy got 200 EU/US mix and 50 free loads included. If someone do use Betabot and don't

understand how it works, then i suggest everyone to use a different botnet for high execution rate and then send to betabot for holding and you will be able to see how shit it truly is.

Matter of the fact is, when someone don't know how his botnet is working then he probably shouldn't use the botnet,

I dislike members who then try to learn me about botnet's, i have multiple certifications and i live by the code.

I'm on forums 10x worse than Hackforums.net and i'm especially known for malware, it's a awful little amount of loads and i even offered him my private botnet to get loads to it and then he could resend himself to his cracked bb 1.8.0.11 botnet which is only scantime FUD.

I offered him compensation of loads until he was happy since i didn't want the drama cause he is a beginner, you can see it in the chat and via my private botnet.

He then refuses when i called him out on the runtime and he then tries to ask for refund, he knew at this point he was fcked.

You can even read how i correct the 7 to 8 immediately and how i told him that only the file was binded to it, antivirus program will always check processes in runtime and block the processes if they are detected.

Read in chat how i corrected after 3 seconds and i just told him specific which software his program was binded too, that he can't understand it - just make him dumber.

The guy don't understand encoding, hashing or encryption nor was he able to comprehend that md5 is used to hash passwords strings for example but that don't matter, what really matters is his behaviour and that everything is selfcaused and no conflict that i created.

USER HAVE EDITED CHATLOGS.

Read this:

<https://pastebin.com/6cpYXJBR>

His file executions:

http://198.50.152.162/torx/?execfile_name=expl0it.exe

His UD/Undetected BIN/EXE:

http://198.50.152.162/torx/customers/exploit.*

(Filtered .exe, so nobody gets infected), if you want to scan yourself then type .exe instead of

.***Editing
