Best exploit tool I have ever used so far.... always FUD !

shadow11910 - July 4, 2018, 10:30 pm

VERY HQ, This builder has 4 methods of execution and any one I use always has amazing scantime and runtime.....hope this doesn't change in the future !

I'm currently enjoying it !

LightCreep - July 5, 2018, 12:07 am

Thanks for the kind words guys. I will do my best to keep it up for a long time.

Also, 2 more one day vouch copies available. Hopefully I will see some good reviews soon.

Am very much interested in this but this amount at \$200 for a macro builder is just way too much for me, any discounted offers?

Will not do the current discount provided the thread anymore, but the original price will be \$150 for everyone per month.

And \$100 for two weeks.

I sold this tool on more platforms than HF. Not everything is firstly posted on HF... mostly good things.

How do other macro sellers feel about my presence in the market (jealousy maybe?).

He rated me one star :))

It's competition,

your product is more over priced for a macro exploit tbh

dand4871 - July 6, 2018, 10:09 am

Perfect one from another seller

\$150 is overpriced? Check the features first if you know what they are and then rethink it.

LORD OF FULL\$ - July 7, 2018, 5:29 am

I would love to have vouch copy

Blood-Stone102 - July 7, 2018, 4:37 pm

Hmm. Interesting. But very overpriced \$150 a month you get a pack of exploits including macro at \$150 a month. For a macro builder, this price is too much. Reduce it to \$50 a month people might consider buying it. anyway GLWS

There are no more vouch copies at the moment, waiting on the ones that received it to post a review. If in the following 2 days there are any that requested and didn't submit license I will send you a PM

As for the others, I am not lowering the price, I don't care about your pity price or things like that. If you do not want to purchase do not trash my sales thread, I will start reporting.

This thread is not for opinions on price or refunds or anything. If you want to suggest something simply PM me, no show-offs here.

Phantom Aboki - July 8, 2018, 1:28 am

OP sent me a vouch copy for this and here's my honest review.

The tool is easy to use with different delivery methods to choose from and few other options you can choose from if you want.

Overall, the exploits work fine.

However I tested exploited doc files on 2 different PC that has AVG and MSE antivirus, these were my findings;

When I build with 2 particular delivery methods, the doc files were undetected by AVG and MSE and executes fine.

But when I build with the other delivery methods, AVG and MSE detect and delete the doc files.

I didnt test on other AVs so I cant say how they would perform against the rest AVs.

If I understand you clearly, are you saying that the 2 detection are from me and that you do not get any detection?

Please confirm.

Hey, it depends on the settings you use. That's when Loops and Junk Code comes handy. Junk Code, Loops, Start Points (Doc Open, Doc Close) are there so you can modify the detection rate yourself in care there are some minor detections like that. Also template and link you use can influence detection rate as well.

Still selling people.

Few have not confirmed the review copies, if they don't do it till tomorrow I will put them on available again. Check the thread for news.
