Thread: [USB Kali Linux install freeze issue](#)

OGPM8 - July 7, 2018, 2:41 pm

If you have any knowledge pls check
[/showthread.php?tid=5857904](#)

CyberStrike - July 7, 2018, 4:23 pm

First a link to the thread :

<https://hackforums.net/showthread.php?tid=5857904>

(BTW the people in the Linux/Unix section are pretty good I tend to post there randomly)

I'll post more after some research

What Laptop or desktop is this btw? I know it's a macbook just wondering which one

Edit: Not sure yet if we need this but just as a note

Some devices may be disabled when you boot to another OS just because they have not gotten to the point to load. Just plug in a keyboard. Or, use VM software and get to Kali alternatively.

HangMansheart - July 8, 2018, 4:27 am

In the past with most Linux install issues that I've had, most of the time a hard drive problem. Try manually partitioning beforehand or installing it to an external device to confirm.

CyberStrike - July 8, 2018, 4:39 am

OSX comes with virtual box it's probably better if you use virtualbox if you want to do wifi stuff get a couple of external adapters.
