Thread: [Crazy slow deploy times Xamarin iOS](#)

passwords - July 7, 2018, 4:25 pm

So for the past two days I've been playing around with developing iOS apps.
The setup consists of a MacBook Pro, iPhone 7 and my PC.

Whenever I try to deploy the application onto my physical device (being my iPhone 7)
it takes 2-5 minutes to deploy it.
Has anyone experienced this or is this just me?

I just use Xamarin Live Player, I'm able to test and deploy applications to my iDevice instantly.
Here's the Microsoft Article:

<https://docs.microsoft.com/en-us/xamarin/tools/live-player/install?tabs=ios%2Cwindows>

Here's the iOS TestFlight invite form: <https://fastring.xamarinliveplayer.com/>

Appreciate it!

Hopefully it supports the Ryzen CPU, most emulators works soooooooooo slow without Hyper-V

EDIT

HOLY JESUS CHRIST!

THAT'S INSTANT!
