Ok here is an easy as fuck way to do this buddy, i'm pretty sure it's public but hey :P

1. Add the target on facebook, it can be from your personal or even a fake account. they have to accept the request before you move onto step 2
2. Make a yahoo account and then go to your mail, click contacts and then under facebook click import.
3. All your facebook friends emails will be listed, if you see a name and a blank space then they used a phone number to sign up, not an email.

Hope i could help you out, let me know how you got on <3

Yeah we know about this method. The person is a fugitive. They aren't accepting friends they don't know.

I dont think importing from FB is a option anymore. I dont see it.

Edit: NVM. Im a idiot.
