Thread: [List Cleaner \(Email\) 1.0.0](#)

The Khan - July 8, 2018, 11:53 pm

I have created a small app that cleans email list according to needs i.e.

If email list have

1. Invalid emails

2. Duplicate emails

3. Contains

--i-- .gov

--ii-- .edu

--iii-- .net

--iv-- .org

--v-- .com

--vi-- Specific Provider

--vii-- Specific Country

--viii-- or Any other word/query you want

4. Doesn't contain (above)

Watch Video (Download link available in description)

Code youtube.com/watch?v=cP_HwQ8eOdg

Wrong section. this should be in the '[Hacking Tools and Programs](#)' section.

I also highly doubt this was written in C/C++

The Khan - July 9, 2018, 7:20 pm

I have wrote that in C#,

I really didn't know where to post/share, I thought this portion/section good for sharing so I did....

Sorry if the section is wrong

Sorry if the section is wrong

[this](#) is the c# section. if you are going to post a program without the source it belongs in the first section i directed you towards.

Good luck to you
