Thread: [\[FASTEST\] PERSES Scanner/Cracker \(SMTP, RDP, FTP\) - \\$5](#)

J0K?R - July 9, 2018, 2:01 am

PERSES is an application written in python which provides the following functions :

[Lightening Fast Port Scanner \(65k IPs in under 2 minutes\)](#)

[SMTP Checker/Bruteforcer](#)

[Fresh Proxy Aggregation and Scraping](#)

[FTP Bruteforcer](#)

[RDP Cracker](#)

A quick demonstration of the application :

As all of these tools are written and optimized in Python this is a command line / terminal application that can run on both windows and linux.

For the foreseeable future we will be only accepting BTC however if there is enough demand we can extend the payment platforms used.

We will be adding new modules for the application as the development continues and will be taking suggestions from the community.

The following packages are available currently and can be purchased through CoinGate:

[Daily \\$5](#)

[Weekly \\$20](#)

[Monthly \\$50](#)

[Lifetime \\$500](#)

Refunds will NOT be permitted going forward. If you have questions about the application please feel free to reach out via the thread or PM.

Please let us know if you have any questions or concerns, we are happy to assist.

Edit (07/19/18) : Due to recent issues with install experience, we have decided to put sales on hold until the next version has been completed. Please PM me if you have any questions regarding this

Edit (07/20/18) : We have updated the application and have the application running from a contained environment using a single application client. Please feel free to post here or PM me for any questions.

Edit (07/22/18) : We have updated the application which now has the RDP Cracking module fully working on Windows OS

MiLkBoNe - July 9, 2018, 2:03 am

Looks interesting to me. Sending you a message.

J0K?R - July 9, 2018, 2:34 am

(Jul 9, 2018 02:03 AM)MiLkBoNe Wrote: [\[CITE\]](#) Looks interesting to me. Sending you a message.
Thanks for the interest, replied

Lextian - July 9, 2018, 8:50 am

Very interesting tool you have here, does the smtp/rdp comes with their user/pass list for it to brute/crack from? how many results can we pull from this daily?

J0K?R - July 9, 2018, 10:57 am

(Jul 9, 2018 08:50 AM)Lextian Wrote: [\[CITE\]](#) Very interesting tool you have here, does the smtp/rdp comes with their user/pass list for it to brute/crack from? how many results can we pull from this daily?

Thanks for the interest. Yes, the current state of the SMTP and RDP cracker is user/pass list however we are working on integrating exploits for server 2008 which should increase the yeild of results.

We can include the user/pass lists if needed.

Stellen Sie TT - July 12, 2018, 7:40 am

I think this is nice. I would like to know just like Lextian asked...
Does the result of the SMTP SCANS come in this form

SMTP Server:
SMTP IP:
Port:
Username:
Password:

J0K?R - July 14, 2018, 2:30 am

(Jul 9, 2018 02:03 AM)MiLkBoNe Wrote: [\[CITE\]](#) Looks interesting to me. Sending you a message.

(Jul 12, 2018 07:40 AM)Stellen Sie TT Wrote: [\[CITE\]](#) I think this is nice. I would like to know just like Lextian asked...

Does the result of the SMTP SCANS come in this form

SMTP Server:
SMTP IP:
Port:
Username:
Password:

It would have to search via domain instead of IP but yes, the output would be similar to that. I have included video demonstration of the tool using each of the modules. PM me or comment here if you needed any further information

Stellen Sie TT - July 14, 2018, 2:52 am

Let's say I want to get this; how do we go about it?
Secondly, who's going to do the setup for me?

Am I advised to use this on my normal desktop or inside an RDP?

darkopas - July 14, 2018, 4:23 am

Hi, do you send me contact info?

J0K?R - July 14, 2018, 8:59 am

(Jul 14, 2018 02:52 AM)Stellen Sie TT Wrote: [\[CITE\]](#) Let's say I want to get this; how do we go about it?

As long as you have a decent VPN setup you can do it from your desktop however an RDP / Linux server will also work.

We will assist with the installation of the application and provide a guide on basic and advanced features

(Jul 14, 2018 04:23 AM)darkopas Wrote: [\[CITE\]](#) Hi, do you send me contact info?

Sent a PM. Thanks for your interest

abewater - July 14, 2018, 9:53 am

Hello I am reading all comment here and I hope you are for real, I bought an SMTP recently it was totally rubbish it crack a lot of SMTP but none even work. so how does yours work? do I need to provide all the email, How do we start? I want to try weekly purchase if it works well I will pay for more . do you have skype? and i hope you accept PayPal or bitcoin

J0K?R - July 15, 2018, 2:07 am

Yes I can assure you this is very real. You provide a hostlist of domains you wish to crack, a username list and a password list. You give PERSES the files and it will crack the accounts based on the combinations it finds via the files.

If you need any further information or clarification please feel free to reach out via PM or just comment here.

abewater - July 15, 2018, 9:34 am

Hello, what i want to ask you is this. i will have to send you all my hostlist. I thought if i bought it you will send me PERSES Scanner/Cracker (SMTP, RDP, FTP) file to set it up and start using for a week? if so how do I receive all my crack and do i need to send you my email so that when it cracks it send it to my email direct please clarify?

J0K?R - July 15, 2018, 10:20 am

(Jul 15, 2018 09:34 AM)abewater Wrote: [\[CITE\]](#) Hello, what i want to ask you is this. i will have to send you all my hostlist. You get the application to run from your computer and can use it however you like. You define the domains through the hostlist and load that into the framework by declaring the directory/path of the

hostfile. You get the results directly on your computer / server. Please let me know if you have any further questions. Thanks for your interest.

Stellen Sie TT - July 15, 2018, 11:35 am

Payment can be made using certain Crypto's via the payment links at the bottom of the sales thread. Once payment has been completed I will be assisting you with setup of the tool. TeamViewer can be used for remote control support and installation however the process for installing PERSES has been streamlined to allow for easy setups.

The domain/host list would be similar to this, where you list out the domains you wish to attempt to crack and as long as the application can connect to defined SMTP ports then it will bruteforce the usernames and passwords

In terms of VPN / RDP, in an ideal world you would first VPN from your computer to an RDP / linux server and run the tool from there to avoid any possible leak of your location / logical attributes however a VPN from your desktop should be more than enough.

Please let us know if you have any further questions

Stellen Sie TT - July 16, 2018, 3:09 am

I still don't understand this. I provide a hostlist, i also provide a emails I want to crack.
Yes I know of the emails, but I don't know of a hostlist.
