Thread: [EdgeLog, Orion Keylogger running off stolen source code from freeware UID 1817532](#)

Zombie [?] - July 9, 2018, 12:35 pm

Disclaimer: I am not trying to defame or harass any of the sellers or the coder himself, but this is FULL disclosure showing the link between all the products running off the same old 2012 source code (which is public and leaked by now)

This is NOT classified as sales trashing as I am only posting this out of spite towards people stealing from free/opensource code.

History of Data Acquired

I was not intending to make this thread but the [coder](#) gives me no choice. I will list one by one all the names this keylogger has went by.

1. ShadowLogger

So it was initially sold by ShadowLogger, mind you this was not coded by [Marwix or Keiko or NoNameFail](#) (the moniker he used to use then) - but it was coded by the user [Tweety](#) - who shared the source of ShadowLogger with him for free.

The version he was actively selling was backdoored/infected (again not sure if he was aware of it) but it was highlighted in a blogpost on <http://blog.MalwareMustDie.org>

Link has been not posted publicly to protect Marwix's identity but it has in-depth proof of the first release being backdoored.

Note: This is coded by Tweety, and he is absolutely free to open-source it like [imi-tat0r](#) did with RWX RAT as people were stealing its code - <https://hackforums.net/showthread.php?tid=4702361>

2. ZeroLogger

For some reasons (after he possibly sold ownership to it lol) he changed it to ZeroLogger which was sold to [Cyph Jr](#) (now closed)

Since the owners of ZeroLogger never sold it after Cyph Jr was closed after his account was compromised.

I also have full permission from Cyph Jr to release ZeroLogger for free as he clearly does not want people profiting from something he bought full ownership for.

Sales thread for ZeroLogger: <https://hackforums.net/showthread.php?tid=4688467> from 2015

3. LummoX Logger

After a while, LummoX Logger was released

The coder has junked the sales thread for it but there is an open auction thread:

<https://hackforums.net/showthread.php?tid=5852060>

Note that this keylogger was from 2015 and he tried to sell ownership to it in 2018.

It is clear that that its the exact same source from a product sold in 2016 as we can conclude from [Vyxn](#)'s post [here](#) which exposed LummoX being the same as NightShades Logger.

4. Volt Logger

This was sold by the member [Darkwin](#) here <https://hackforums.net/showthread.php?tid=5101547>

Soon after, it was known as Volt Logger, sold here:

<https://hackforums.net/showthread.php?tid=5235641> till the owner was closed.

5. MetroLog

Seeing this, Marwix was quick enough to sell it as MetroLog as well:

<https://hackforums.net/showthread.php?tid=5387222>

Now, look closely here:

<https://hackforums.net/showthread.php?tid=5387222&pid=52394176#pid52394176>

Post quoted:

(Sep 9, 2016 07:58 PM)maxlifted Wrote: [\[CITE\]](#) was this product sold to you? i bought a lifetime license when it was previously called LummoX then later changed the name to Volt and a new name has emerged again called Metrolog. Kindly reactivate my license for this new name. My user name is jinny. Thanks

Customer even alleges that the keylogger is copy + pasted.

6. Nightshades Logger

It was released as Nightshades Logger last year as well, this was sold by the user [AFTERMATH](#)

The sales thread is edited out: <https://hackforums.net/showthread.php?tid=5406748>

But there is a video here: https://www.youtube.com/watch?v=6BRBS_Q1CO4 (Published on Sep 25, 2016). Note that this is the same GUI as LummoX Logger.

7. Orion Logger

Moving on to the next one, Orion Logger.

Original thread: <https://hackforums.net/showthread.php?tid=5731376> which was formerly sold by the user [Maxim](#)

It was sold to the user [B FOR BADASS](#) who is actively selling it here

<https://hackforums.net/showthread.php?tid=5730793>

8. EdgeLog

Finally it is released as EdgeLog <https://hackforums.net/showthread.php?tid=5858344> by the user [Meow](#)

Note that it claims to be the "newest keylogger out there, a fresh keylogger" while it is still running from ShadowLogger which was coded over 5 years ago

Screenshots Gallery

Now before anyone tells me some of these loggers are in C# and some are in VB which is pretty much the same lets have a look at all of their UIs

1. ShadowLogger

2. ZeroLogger

3. LummoX Logger

4. Volt Logger

6. Nightshades Logger

5. MetroLog

7. Orion Logger

8. EdgeLog

Spoiler ([Click to View](#))

The screenshots show enough similarity. I will leave the rest to the coder, [Tweety](#), who wrote the code to elaborate about majority of the functions being the same.

Update:

New keylogger - #9 Ond Keylogger

Seems like a complete paste of Orion

SIM-1847363 - July 9, 2018, 1:05 pm

PROOF THAT ITS NOT COPY AND PASTA OR STOLEN CODE / FREE CODE:

ShadowLogger Keyhook(Tweety's) on the Right compared to Marwix on the Left. Yea sure its copy and pasta xD (nope its not, like I said from 3 and down its his own code!).

Spoiler ([Click to View](#))

1(shadow-logger) and 2(ZeroLogger) is copy and pasta but from 3(LummoX) and down is his own work, vouch for Marwix I have known him since before I joined HF. Look at jLog there isn't any copy and pasta there.

Can you give him credit where credit is do? Like tbh without the themes the code is still different and modified in a sense of project management.

gringo - July 9, 2018, 1:08 pm

Damn these dudes really aren't creative when it comes to ripping off code and redesigning interfaces, everything is basically in the same orientation but just a different theme lmao. I'm glad someone finally called these dudes out, good on you.

tweety - July 9, 2018, 1:14 pm

Can confirm this little tard has been leaching off the same source I wrote years ago. Help him out once, he turns into a fraud monetizing off my source as well as his scams. I'm disappointed he went from little allan into a classic HF scammer/frauder.

It's disgusting what this market place has come down to, people like him need to be slapped out of the market place. The child doesn't even know how to dev correctly. I'll post an update when I'm

available to do so.

Marwix - July 9, 2018, 1:14 pm

I can admit that ShadowLogger was made with Tweety's help as I was not familiar with programming back in 2014 when I made it. ZeroLogger was an improved version of ShadowLogger because it was incomplete and had tons of bugs even if it worked as intended.

LummoX Logger was later made in C# by me and nobody else. Tweety has NO association with my C# keyloggers, and he can't prove it either. Even if the UI of each of my projects look similar, they are totally different. The reason why I made more C# keyloggers is because I was improving each project with new features and better stability.

After I made a bunch of C# keyloggers, I decided to take a step further and create the first ever java keylogger on the market named jLog which took me around 2-3 months to code from scratch. Now before you accuse me of being a bad coder, have in mind that I have done and worked with many other projects during my time on hackforums. You can't really rely on different GUI's and tell me that they have the same source code in them. There has always been an improvement for each project.

LummoX, for example, was my first C# keylogger and it was server-sided whereas my other keyloggers were not.

"disclosure showing the link between all the products running off the same old 2012 source code (which is public and leaked by now)" - You are so retarded, ShadowLogger was made in 2014 and the source code is not from 2012. ? I was not even on hackforums at the time.

Prove to me that you made those C# keyloggers and that the keyhook is yours.

Also, prove to me that jLog was your creation as well before posting shit.

Show me the source code that you gave him, and I want to compare it with his. I'm a software engineer at ISU so i have no use for your code other than to prove his innocence.

tweety - July 9, 2018, 1:19 pm

I don't need to show you anything, you're on a bias standing point as you pointed out that you've been friends for a long time and your qualification doesn't mean fuck all to me.

He already admitted that I wrote shadow and the other pile of crap after it.

SIM-1847363 - July 9, 2018, 1:21 pm

He already admitted that I wrote shadow and the other pile of crap after it. TBH sexy boi its not crap or you could do it better, right? But I don't see your programming skills other than some old code. Love you baby!

I'm not biased I just rather see if its true.

Meow - July 9, 2018, 1:25 pm

Lmao, that is why you gave me -3 & sales trashed on the keylogger thread. It should take you no more than a few minutes to send the source to Kevin so he can see what's going on.

gringo - July 9, 2018, 1:30 pm

Yea because everyone has available backups of shit they coded 6 years ago lmao

Darkwin - July 9, 2018, 1:49 pm

Invalid alert!

This is getting pretty pathetic, I've watched Tweety. come after Marwix for YEARS while he freelanced for me and have said nothing about it.

Time after time again Marwix has asked Tweety. for proof that he created the C# logger and that the keyhook & code is his, We have yet to gotten an answer for that.

I'll leave it at that, Zombie it really isn't none of your business but its obvious you've taken sides and your 'disclaimer' is moot.

I think the better question is why now? lol stop d-riding cuh!

Vyxn - July 10, 2018, 2:03 am

I'll throwing my comments here in programmer's perspective.

It is very easy to convert C# and VB.NET codes vise versa so the argument of "this is coded in vb.net, this is coded in c#" is already invalid. Now the thing need to be settle in here is the proof showing differences with each code. Not the whole code, just a snippet with same functions of different keyloggers to see if there's any improvement.

Actually, seeing same looks (allegedly same source) of keyloggers make me sad for the community. :(

VloneVersace - July 19, 2018, 4:57 pm

Damn.. Whats the point of this thread

Vyxn - July 20, 2018, 3:57 am

(Jul 19, 2018 04:57 PM)VloneVersace Wrote: [\[CITE\]](#) Damn.. Whats the point of this thread
You should've read it again?

int - July 20, 2018, 7:25 am

A bit suspicious. Interesting thread though, I will be sure to stay away from hf malware

TOM - July 21, 2018, 12:05 pm

Looks Interesting and is this Another Improved version of it ?
<https://hackforums.net/showthread.php?tid=5863701>

SIM-2875347 - July 21, 2018, 12:16 pm

I do have to admit it is suspicious how many keyloggers he's sold in such a short period of time. I have no idea if they are copy pasted or whatnot but still.

Eccy - July 21, 2018, 12:19 pm

Damn this is laid out nice

Zombie [?] - August 8, 2018, 4:34 am

Thanks, added.

Vyxn - August 8, 2018, 8:56 pm

I just re-read the "title" of the thread. I don't think its a stolen source code because he bought it from Tweety so he clearly has the rights to retheme and milk from this. Still, not right tho.

<https://hackforums.net/showthread.php?tid=5863701>
You also bought a source code from him, right?
Oh, and OND looks like the twin of Orion Keylogger.

tweety - August 9, 2018, 7:07 am

Oh, and OND looks like the twin of Orion Keylogger.
it's all the same thing, change the UI and sell it to the next person. very typical hf thing to do and it seems like people are falling for it. the worst part is the source has been leaked on 2 other forums, people are paying for leaked recycled code.

Zombie [?] - August 9, 2018, 9:17 am

Oh, and OND loooks like the twin of Orion Keylogger.
He did not buy the source from Tweety
He just had access to its source as it was freeware and started selling.
Still 2018 but still selling

Still 2018 but still selling
I thought Marwix bought the source. Damn.

Mr_Bot - August 10, 2018, 4:17 am

lol lazy as not wrote their own keylogger.
Really funny and bad for customers of HF.
