?lex - July 10, 2018, 4:03 am

Lets gather up all the compatible tweaks so each and every one of us can try them!

Some tweaks I am using

Eclipse X

Anemone

Boxy 3

BioProtect

Alkaline + Zeppelin

PokeCall (Epic)

Activator

Peek-A-Book (3D touch for non-supported device, also a good tweak)

Cylinder

So far I've tried these and all of them work! You can post what you tried and what works so we know what to download! Also you could post your setup bellow for showcase!

Is there a stable 11.2 beta yet? Not checked in a while

madTRiiKs - July 10, 2018, 3:32 pm

download "tweakCompatible" in cydia, helps see what is working on your jailbreak version.

You can also go to there github and check as well - <https://jlippold.github.io/tweakCompatible/>

Will jailbreaking an iPhone 6S 16GB on iOS 11.2.6 decrease performance tremendously?

I haven't jailbroken since iOS 9 I believe, and I did love the tweaks that I had but my phone at the time did become slower.

You'd use Electra1131 which is quite stable, haven't ran into any performance degrading issues nor battery drain.

Alright, so I'm running iOS 11.4 b3, and have just been installing many tweaks to make the "dream phone" and see how much it will take to crash, and I have yet to see any problems or battery issues. Amazing.

My tweaks:

Aerify

Anemone

AutoUnlockX

badIOSbad

Barmoji

BatteryNotch
BatteryPrecentX
Carrierizer
CCmodules
CrashReporter
Cylinder
DoubleTapLock
Eclipse X
FloatingDock
HideBarX
Hyperion
Liberty Lite
Lotus
MakeCydiaBuyAgain
ModernXI
NoMoreSmallApps
Nudekeys
Oyster
SimpleLSiOS
SmoothCursor
Sugarcane
Swiper
TapticKeys
Twitter Dark mode

I'm very surprised the phone runs without any problems at all with all these tweaks installed. Never used a jailbreak this stable before.
