I'm looking for suggestions to binge read various books, related to the topic of innovation and entrepreneurship, particularly related to tech startups/young entrepreneurs

In particular, suggest me any good reads, which go from an introduction to a guideline of the methodology/process on how to unleash the inner creativity in designing and coming up with unique ideas which are practical and applicable. ?

Any related personal experiences/anecdotes are welcome too. ?

An old school friend of mine started selling these special chickens to some french speaking African nation, probably a millionaire by now as we last spoke a few months back and they had made around 300k in 2 months.

You don't have to reinvent the wheel to be innovative. Good luck with your search.

I recommend reading Think and Grow Rich. It's a book by Napoleon Hill.

I want to second this book. I was going to suggest it and couldn't think of it, but Aurora here named it already. Its a really good read.

It's a great book. I always recommend it to young people who want to start their own business.
