Thread: [How do i remove all Cydia Tweaks without restoring or removing JB](#)

VENI - July 10, 2018, 11:56 pm

Hello evryone is there a way to remove all cydia tweaks at once and keep your JB also without restoring your device.

Ipad Version: 11.2.1

JB Type: Electra1131

I know that there is a thing called SemiRestore Lite but it is not compatiabile with 11.2.1

Like I said before, go to <https://www.reddit.com/r/jailbreak/>

There are other people on HackForums that can help, why suggest another community? That just sounds lazy and LQ.

OP, one of the fastest ways to remove almost all tweaks is to just remove Substitute, this should queue all tweaks that use Substitute into the removal queue.

The reason I suggested it is because the reddit has helped me before and the people there have a ton of experience.

I've seen dumb answers for the question he just asked from the jailbreak subreddit, not everyone is experienced there. Often desperate people try the first solution given to them, which could be completely wrong, and then these people complain why their device doesn't work properly anymore.
