One of the reasons why you need to dive into Reddit. There are thousands of possibilities if you can rank you posts.

[Video: <https://www.youtube.com/watch?v=eHpDWm3zoTI&t=652s>]

Feel free to post your queries below.

Q and A

What is the Requirements to run Reddit Voter?

Windows Vista (or Newer)

.NET Frameworks 4.6.2

Chrome Browser

How many upvotes the bot can do? Like how many maximum accounts it supports.

Regarding the accounts that the bot can hold, this will depend on the performance of your hardware. So far I was able to run a couple of hundreds of accounts.

New accounts are okay to get upvotes or we need aged accounts?

New accounts can upvote immediately as long as they are email verified. But I would suggest older accounts, 5 days old or older.

Apart from proxies & Reddit accounts, DO I need any other stuff to run the bot?

You need at least a windows vista or newer OS for your hardware.

Newest Framework and Google Chrome to be installed to your hardware.

Does this bot run on VPS?

If your VPS meets the requirements above, then the bot will be fine running through VPS. Currently running the bot VIA AWS.

Changes: new layout

login bug fixed new job: upvote/downvote comments

many small changes

a small update: The browser saves profiles based on the username, once logged it dont ask again to login

It checks if the user is logged when starting or stopping the job, it will kill all browser processes that was hanging

Changes:

*post comments are working

-it will navigate to the posts URLs and select a random comment from the comments box and use it

Changes:

More icons in the menu Spintax allow in comments

Check if chrome is installed Shadow text in boxes explaining each box

fewer files and size in the software folder New icon in the exe file

Changes:

Error messages in results New option to select to save or not the cookies

minor bug fixed

Changes: Right-click menu for all text boxes that allow load from files and save to files

New menu tools>Kill all chrome when running for a long time your pc might get chrome processes hanging in memory

I'm interested in the extra services.

Would you accept amazon giftcards/other giftcards or something from G2a? Because my PayPal is limited and I have money on my credit card.

If you do accept giftcards/something from g2a, send me a PM with your discord

Reddit Voter Update

Version 1.04 Released

What's New:

- Incognito Mode [New] - Added an option for the users to use incognito in doing the votes
- User Agents [New] - Included multiple user agents to distract reddit

Both of the new features above makes the bot harder to detect by reddit as bot. And this means it will now send the same footprints to Reddit. It is now sending a greater rate of sticking votes.

- Account Creator [Beta Mode] - Beta mode is added to the Reddit voter. The account creator does register an account but it does not do the captcha yet. Solving captchas will be done manually. We are still integrating to add captcha solver to account creator. Any suggestions of recaptcha that solves captchas of reddit are entertained.

-Check Updates [Updated] - Reddit voter is now able to check new updates and let's you download the update without login in to the members area.

- Minor Bugs [Fixed]

waraffiliate - August 15, 2018, 7:08 am

Anyone interested for coupon, Just reply here and I'll send you one.

Reddit Work in Progress

- Adding the subscribe to subreddits
- Fixing the beta account creator

Hey, I am interested in using your bot. I just have a question. Can I use public proxies to go with the bot? I have good, cracked accounts to go with that. I can't afford to pay for 1-2k private proxies each month so I'd need to use public ones. Would I need to rotate them or not?

Thanks.

Public proxies are not advisable. more or less your votes will not stick.

Hello war affiliate, very nice software you have right there. Would you be up for, instead, selling upvotes/downvotes?

I would gladly purchase in stock. Thank you.

Greetings,

I would like to announce that a written guide is uploaded in the site. This will at least help you to get started with Reddit Voter.

You may navigate to <http://redditvoter.bigboysbots.com/downloadguide.pdf> for the guide.

I would also clarify that the account creator is under dev, hence it has major errors/bugs. I am planning to remove it in the Bot while it is being developed.

Discounts are still on going and ends in September 20!

Cheers!

Hello, may I know which proxies are you using?

This is quite unrealistic, you should have at least send a message over PM on which feature does not work. I should have helped you. Anyways, you are always free to ask queries. But before that please let me know the proxies you used. Thanks
