Thread: [Sentinel Questions!](#)

SadlyNo - July 18, 2018, 1:08 pm

Hey guys, I'm an idiot who knows 0 so please don't hate. I really want to learn this stuff and I'm also going to learn C++ and other languages so maybe I can create my own someday!

Well, that was just an introduction, I had a few questions on Sentinal Keylogger.

Note: If Sentinal Keylogger staff see this I just purchases a day and a half ago have been trying to contact you guys since :/ not hating I understand ur busy just don't take too long ? ;)

- 1) What are the best settings? My Malwarebytes, AVG, and even Windows Defender catch my file as a virus!
- 2) I was told someone who knows what their doing can deconstruct my file or something and grab the email info that I provided is that true? How easy is it?
- 3) I'm told I need to encrypt my file further for fewer detections anyone care to explain the basics and a good encrypter I can use?
- 4) I see there's a combine file (forgot exact name) feature and when I do it lets say with an image the file is still extracted to a stub and it's not an image, why? Whats the best way to use this feature?
- 5) Whats the best way of spreading? Stupid question but is there a doc for this type of social engineering haha.

Thank you all! ?

DamienVC - July 18, 2018, 3:09 pm

Hey don't worry. I've made sure you got responded on Rocketr/Skype/Discord as wlel.

Its Sentinel to start with, responding to the questions;

1. The default settings are fine, although disabling AVKill and enabling PWs make it better. While doing tests on any RDPs/VMs, disabling Anti-Debug is usually recommended
2. It is actually possible with every keylogger, but I'm sure everyone uses encryption to prevent such things from happening. Mostly people use throwaway emails or disposable webmail addresses (i.e. Vivaldi or any private webmails)
3. Compatible crypters as listed, include Spartan Crypter, Topher Crypter, DataProtector and DarKEYE.
4. As I've explained, file binders dont assume the extension of the file, to purely replicate an extension, an exploit is required.
5. Spreading usually has various ways, SEing to people you know irl, having external links, or using EKs (only for high level malware, which is usually native and non-dependent). There are old ways, including YT, SEO (fake app sites, etc), and torrent spreading. Some of them may still work, yeah.

SadlyNo - July 18, 2018, 3:26 pm

AMAZING SUPPORT! Im amazed and happy you took the time to answer this even though you already did on discord. Thank you.

Hi Damien, could you also PM me your Skype or Discord name so I can reach out with a couple of questions directly?

~ Thx

Renozo - December 16, 2018, 2:10 am

does someone know how to remove admin password access

i want disable windows defender and firewall on a pc in the store but pc request password

SadlyNo - January 10, 2019, 3:45 pm

I contacted you on a couple of platforms when your free can you check them? I lost my license, thanks :)

I cant PM on here so I sent u a message on SKype with the info.

mulderhans65 - February 25, 2019, 7:11 am

hello

i am interested to buy a good password recovery. i am interested also to recover the outlook password.

can you help me with this ?

thanks

Pirate - February 25, 2019, 7:19 am

dude this is a tough boss to complete.. if you play dark souls 2 you must give an output from your findings on how to finish this boss i have tried for like a 100 times and i get finished by one of the three sentinel bosses .. i have powered up my sword and everything still no luck thanks let me know dude
