Interesting we'll see how this goes. GLWS.

Do you have radar footage?

Radar InGame based. Shows %30-40 for FaceIT.

Frankey - July 21, 2018, 5:17 am

I will review this cheat on Faceit as soon as possible. Will edit my post after I've played with it.

MINTAN - July 21, 2018, 8:42 am

Interested after it has been reviewed.

Frankey - July 21, 2018, 9:09 am

I have just played a FaceIT match with LOLSHAN his FaceIT (/other AC) CS:GO Cheat. And I am amazed.

The user sets everything up for me through Teamviewer, which took around 10 minutes. Launching the cheat takes about 3 minutes each time. I cannot say anything about it being undetected or not since bans can be delayed. But, I did not get instantly banned and I did use the client.

The cheat itself works as advertised, the radar is a radar that shows the positions of the enemies on your in-game radar and worked fine. You get a config file where you can change every weapon individually; it's truly amazing. You can change your config on-the-go. Just press DELETE and the config get's reloaded.

If my FaceIT account is not banned next week, I will fully vouch for this.

The cheat is working as advertised. I will report back on if it is undetected as soon as possible.

Update: I am banned from FaceIT For cheating.

Op is proven to be a paster. Just the fact that you have a static config file and it lets you reload it ingame is enough for anyone to know its detected.

Treebeard_ - July 22, 2018, 9:08 am

I have a bunch of questions here.

Why are your other accounts VAC banned? One account was VAC'd 4 days ago. Why? Were you using a different cheat? If so, why would you use another cheat when you have your own cheat? How can your cheat be undetected on clients but cannot beat VAC? I do not understand.

How long have you been testing the cheat for using a client? Have there ever been any bans reported at all during this time period? How much testing did you do prior to releasing this to the public? If this is truly UD on these clients, why is it so cheap, and why on earth would you create a facebook page and not just advertise on cheating forums? Seems like you're trying to bring a lot of attention to yourself when realistically acquiring sales for a product capable of bypassing client anti-cheats would be extremely easy.

Hope you can answer these questions in full.

Haha this is a scam, he also tried it on various other forums (high minded, yougame) and his thread got closed every time. One of my friends was stupid enough to buy this and found out that this is just the public "face injector" bullshit that is on yougame.

I don't think that's necessarily public since you still have to purchase (I believe, could be wrong, don't really remember), but nonetheless I believe you. Did your friend get banned?

The topics in yougame or pvpru never closed. and the customers came. 15 slots full. You can understand the video with face injector. With process hacker you can see driver names. face injector driver is not found :)

and no banned customers!

I used the Inventory Changer on the internet to have fun as I said many times. and I adapted it to the panorama. I had fun with my friends.

product can not be detected. If you look at the accounts that are on the video, there is no prohibition.

All information is available on our forum site. product Since 21.08.2017 has not been banned.

I thought it was cheap for the turkey. When TurkeyCoder was first established, sales were only made to the Turkish market. facebook page was in it. If you look carefully, there is only Turkish sharing.

It's not as easy as you say it is. because most people think it is a deception.

and I have to make an ad. I am the only one. my team is just testing. I work with customers and develop products. I am sending lots of evidence and customer comments to give me a chance when people show interest. If they want, they can talk to my customers. I made ads on high-minded. but those times did not have a trial run. People thought it was a hoax. and my account was not authorized to promote the product. I deleted. but they still have their comments.

Best regards, LOLSHAN ?

If anyone has a little idea how faceit anticheat works knows this will be detected the moment they do a manual analysis. He is starting the cheat and loading the driver when faceit driver is already running. But this should be fine for vac from the looks of it.

The driver is being installed before AC starts. And starts the base by booting. Watch with video eyes.

Edit: I can not tell you how it works. but the "faceit driver" can not read while the cheat is loaded.

You do not have to believe, I make customers happy and make money. the trustworthy person was the guarantor and confirmed that he was working. I do not care others.

i mean it's just weird that these p2c sites that are offering a League cheat almost all have the exact same features.

And i don't find it trustworthy when a cheat provider doesn't know if his cheat is detected or not.

ESEA Client (Probably Detected)

And these requirements :

On PC which never get banned before (For FaceIT) so you are saying if a cheater was banned before on his pc he can not use it? otherwise the cause of ban will be blamed due to that?

No Multi Acc (For FaceIT) also if you get banned the cause of ban will be put on this?

There is a risk of being banned when played without cheating.

To ensure that the product is not detected.

and you are so dumb.

While you can not support faceit client the original encoders you trust, if you can paste it and support the faceit client, I expect you to do it.

While you weren't able to provide a vouch to a trusted mod on HM, your rep on PvpRu pretty much shows everything. Honestly deal with caution.

Including that you are able to provide a "Faceit client proof" cheat while not being able to make a skinchanger for yourself without getting banned... suspicious through.

you got banned for "Ban evasion" on faceit with your cheat, which means that you risk your users account by doing that, not smart.
