Thread: [Bitcoin Gambling \(where to post\)](#)

yoghiHD - July 21, 2018, 1:43 pm

I am not sure if this is the correct section but i would like you ask you something.

Especially for casinos of the type "roll dice", there are in circulation a lot of scripts written to win mathematically (eg: martingale...)

How can they be in profit?

If all you need is a high balance.

Another example is bustabit. Bustabit also provides some scripts when you sign up. Will the stop somehow your script ? (for example giving red strikes to kill your balance?)

?

Are you asking about how gambling works?

Path - July 21, 2018, 2:02 pm

Think's it's more about the autopilot scripts side and how the scripts work. Majority of these sites as bustabit do provide the free scripts as you know of, with this being said the game is still luck based and so the scripts will only make you profit short term but longterm you will lose all, bustabit's martingale does work however needs updated to actually be a good martingale strategy though also requires a little research and high investment of at near \$1000 min. You can also find paid scripts where people have custom made and do help though these methods normally knock profit down slightly and still has a short term effect (though will last longer more likely and bring in a bigger profit) though once again long term you will lose all, their is extremely only a few ways to beat these sites and all require large investments or take a huge toll on profit where it's moreless worthless to run though you can find 1 or 2 that can solve this but expect them to be sold for high amounts aha.

(Jul 21, 2018 01:55 PM)Omniscient Wrote: [\[CITE\]](#) Are you asking about how gambling works?

No sir. I am asking how casinos could be in profit if it is so easy (only request high balance)

I've studied a good method since, in my entire life i've never seen 12 reds strike. so...it is just a matter of HIGH BALANCE.
am i wrong ?

Kaleb - July 21, 2018, 2:24 pm

You'll never beat the house. There's a house edge on all these sites and in addition to that there's a maximum bet so martingale will not work even if you had some ridiculously huge bankroll. If it was easy to rob money out of these gambling sites everyone would be doing it.

(Jul 21, 2018 02:24 PM)yoghiHD Wrote: [\[CITE\]](#) I've studied a good method since, in my entire life i've never seen 12 reds strike. so...it is just a matter of HIGH BALANCE.
am i wrong ?

You are wrong. There's been 20+ reds before and I've seen 12+ countless times back when I played. And like I said there's a maximum bet (also a maximum profit / max win).

DenizZ - July 21, 2018, 2:25 pm

House always has an advantage. I don't really understand what you mean though.

Path - July 21, 2018, 2:26 pm

On bustabit you can view the biggest streaks for every payout amount, for 2x it's actually 18 which obviously requires a huge investment to deal with. (Jul 21, 2018 02:24 PM)Under the Radar Wrote: [\[CITE\]](#) You'll never beat the house. House wins majority because people don't have thousands of dollars to invest unfortunately, with the right strategy and investment you can win the house but at a small profit, that's why it's so effective

Kaleb - July 21, 2018, 2:28 pm

That's not why. Even if you had thousands to invest you will still likely lose it all eventually. The house wins the majority because there is a house edge, that's literally what it's there for.. to ensure that Bustabit doesn't lose its entire bankroll and so it can keep profiting. There's not a casino in the world that has no house edge, that would be dumb on their part.

shreder - July 21, 2018, 2:29 pm

effective

you're forced to use small amounts even with a big balance then they hook you because now you're in and with a bit of luck your fucked

Path - July 21, 2018, 2:32 pm

Don't get me wrong you are right, the other guy the other day was betting nearly 10k dollars a round and knocked the max profit to less than 5btc at one point then lost it all but he was random betting, I do believe with such an amount you can martingale and bust the site but no one actually has ever tried it so I guess we will never know but it's the idea that the game is "fair", if it thought it was near broke it can't just recover itself unless someone does a silly bet without thought. (Jul 21, 2018 02:29 PM)shredder Wrote: [\[CITE\]](#) you're forced to use small amounts even with a big balance then they hook you because now you're in and with a bit of luck your fucked

Although you are right, a big enough balance you can martingale careless the case but it just requires a very large balance, as mentioned any other methods always have risk and will never win long term

yoghiHD - July 21, 2018, 2:39 pm

I was thinking on bustabit. to cashout @1.34 and on lose do ("base bet"*4).

In this way, you are always in profit.

lets do the math:

1€ ---> lose.

4€ (total in balance 5) ---> lose

16€ (total in balance 21) ---> lose

64€ (total in balance 85) ---> lose

256€ (total in balance 341) ---> lose

1024€ (total in balance 1365) --> if win, u win: 1372 (and you are in profit)

and so on ...

and i 've never seen so many numbers under 1.34 in strike.

and with 1365€ we are safe for 5 red under 1.34

Kaleb - July 21, 2018, 2:45 pm

Its not manipulated in any way that isn't completely transparent. It's an absolute gamble and you're trying to look at it from an aspect of getting rich or beating the odds which doesn't happen. You have the wrong idea of what Bustabit and casinos in general are supposed to be for and you will lose all your money thinking that way, just trying to help you.

yoghiHD - July 21, 2018, 3:02 pm

yes..you are probably right. i was just thinking why should bustabit give free scripts (like martingale) if they can lose. this means that they cannot lose and you are right again.

Kaleb - July 21, 2018, 3:04 pm

(Jul 21, 2018 03:02 PM)yoghiHD Wrote: [\[CITE\]](#) yes..you are probably right. i was just thinking why should bustabit give free scripts (like martingale) if they can lose. this means that they cannot lose and you are right again.

Pretty much. They give scripts because it doesn't lose them anything, probably helps them gain more because a lot of people leave scripts running thinking they're somehow getting one up on bustabit when in reality they're just prolonging the inevitable. Save your money, don't waste it on Bustabit.

yoghiHD - July 21, 2018, 3:10 pm

yes. those were my thoughts. but i was thinkin on bustabit because i have €800 to spend/waste and i was looking for huge profit or lose.

Path - July 21, 2018, 3:14 pm

The scripts they run will run your broke in a day, their martingale isn't exactly martingale anyways so ignore those scripts for full.

For a real example okay:

2x cashout, requires let's say 20 bets incase 19 is beat too.

To do that from very start require's exactly 1.048576btc / 1048576 bits / 7775.19 dollars. (starting at a 1 bit bet)

Now on average their is 4000 games a day on bustabit, on a 2x cashout that's a 49.50% winrate.

So out of 4000 games we win around let's say 1900, that's 1900 bits which is only 14.09 a day. That is why even for a high investment that WILL beat the game you earn moreless nothing from it and won't be worth anything compared to the amount you must have to just invest that

SotirBay - July 21, 2018, 3:32 pm

I think these sites can bust you even with high balances because sometimes the games crashes and you miss 1-2 rounds which using martingale could be really dangerous

?elevison - July 21, 2018, 3:41 pm

This idea will never work, I also don't condone gambling, and I will never gamble. If someone wins,

then it's purely "luck", and if you keep playing you will lose it. House always wins.

Gambling is exactly that. Taking a gamble with your money.

mawrek - July 22, 2018, 9:05 am

just watch this and you will understand

You obviously missed my point. Most casinos are not "rigged" and the edge the house has is displayed right in front of you. If you think I was saying that casinos exist to make money you're lost bucko. Saying they're rigged is implying that somehow they actually control the outcome of each bet or something to that measure which I'm sure happens on some online casinos but not even most. Most of them can profit just off the house edge.

shreder - July 22, 2018, 6:25 pm

Yup, but what about Bustadice where you make like 100 games for a minute for example. You can easily make few k a day there if you got 1 btc to invest. Are you sure that 20 games doubling on 2x would only take 1.1BTC

If so I am going to run a script. I doubt it will enter such a bad serie. Although 11-12 games use to happen

yoghiHD - July 23, 2018, 7:52 am

this was my question. are they rigged in your modest opinion? if not, is so easy with a script make some money and then go out. maybe repeat 2 days later or something like this.

bustabit had 26 btc max payout for single game. this means i can bet 13 btc and gain @ 2x.

so..to pay my loan i only need 6 BTC. if I have a good starting balance, it might be easy....too easy. this is my doubt.

anyway...after the video that "mawrek" posted..i decided to take another way.

Path - July 23, 2018, 7:56 am

They are not rigged at all no, just the probability of making profit is on the low side so yeah scripts can work if made correctly but this will mean low profit
