Thread: [Obfuscate without Virus Detections?](#)

passwords - July 23, 2018, 11:06 am

Is it possible to obfuscate your code without getting like 10+ detections on VirusTotal?
I'm currently trying out ConfuserEx which gives me 17/67 on normal.

3DES - July 23, 2018, 11:42 am

Write custom packer yourself.

kevy42 - July 23, 2018, 12:04 pm

u know, i dont think OP would ask this type of question if he knew how to make a good obfuscator

Finished working on an application people will buy, and I don't want them to download it after purchasing only to see a bunch of trojan warnings during runtime.

vmcall - July 23, 2018, 12:56 pm

You have a few options:

Get manually whitelisted

Buy a certificate

Remove any identifying characteristics from the known packer (metadata etc)

They most likely check for the confuser metadata value, or you're getting detected from previous malware samples that used similar packer, which triggers their heuristic engine

Read this OP.

And to your buyer, tell them to whitelist your product. That's easy.

gky159 - July 23, 2018, 6:02 pm

dont use public obfuscater ,try Eazfuscator.NET and before do that you should scan your program maybe some code's trigger av's or as user above said Buy a certificate

It's impossible to get 17/67 with ConfuserEx. Maximum 2-5 detections, usually ESET (MSIL.Confuser detection) and perhaps Avira if your storage method is bad.

Remove your icon and generate random assembly information, then try different ways.

Miku2 - July 24, 2018, 8:33 am

change your icon and assembly then obfuscate it .

use private modded confuserEX for better result

Electron - July 24, 2018, 8:49 am

If you want to be sure it's not the icon, simply remove it.

techcrunch - July 26, 2018, 7:20 pm

try private crypters mate

InterGalactic - August 15, 2018, 5:37 am

Do not obfuscate with encryption method. Try obfuscating with fake code method.

This is working for me i get 4 out of 55 and this caused from softwares that report every unknown program as threat!
