As far as i remember I used English in USG and generated a key with XOR Encryption and cloned the assembly of Google Chrome and yea also used an HQ icon.

I tested on njrat 0.7d**

@NyanCat.... When I downloaded from the sendspace link it showed up as a Malware-keylogger infected file...is this normal for a file like this? I wasnt sure as i'm new to the "Crypter" Market so I did not run the file, I immediately deleted. Any feedback would be much appreciated and I apologize in advance if my question is a "Newbie" question but I honestly don't know and I'm just hoping that im not infected with a Keylogger now! :(

Are you using the crypter and your Anti-Virus is ON ? ?

jholmes8888 - July 25, 2018, 11:27 pm

I apologize dude, dang man i hope I didnt screw anything up on your end by trying to download it with my AV on. I actually forgot it was on.... So I guess its safe to assume that my problem wasnt an actual keylogger, rather the AV.

Of course, it's safe, Please use it on a Virtual machine such as Vmware. If you use it on your main pc with AV ON or OFF it will send the samples to AV.

lachaussette - June 15, 2019, 7:19 am

Hello dude,

That's a crypter coded in C# ?

If yes can I get the Source Code to learn from it ?

(lime crypter is on VB so i didn't use it)

Pm me a price if you prefer sell it.
thanks
Ps: I'm not enough good to change it ATM, just learn
