Thread: [Who has the fastest computer on HF.](#)

Mr. Robot - July 28, 2018, 5:06 am

A question I have been asking for a while now, You pick the benching software - i'll run it.

I hope to see some of your results too - we can also tell you what upgrades you should get according to your results.

<http://www.userbenchmark.com/UserRun/9945765>

That's with some load issues for 4k on my hdd, underclocked ram and no OC on my gpu. Will do a restart in a sec for the first time in a while and see how it holds with my ram boosted again.

UPDATE: 10/12/2018.

16gb RAM down but mobo now supports 3200mhz. Time to redo a bench -

1950x @ 1.25v - 4.0ghz OC

Gtx 1080ti @ Driver update from 398.11 to 416.94

Samsung 970 Evo NVMe @ Optimized with windows built in optimization

G.SKILL F4 DDR4 @ Increase from 2133mhz to 3200mhz but down 16gb or ram from 64gb to 48gb

// No GPU overclock during this run - and I can increase CPU to 4.1ghz comfortably if need be. RAM still wont hit 3600 on the new bios version yet but soon. 970 evo isn't optimized as it's not a fresh drive.

<https://www.userbenchmark.com/UserRun/12788955>

Takehito Morokuzu - July 28, 2018, 5:33 am

Userbenchmark, I'll run mine tonight

Eccy - July 28, 2018, 5:34 am

I'll run mine later, I need new ram and cpu, and a motherboard since I've got DDR3 ram and AMD cpu when I want a i7 8700k

OnePlus6 - July 28, 2018, 5:36 am

Fuck man you're such a cringeworthy nerd.

ItsJigSaw - July 28, 2018, 5:36 am

Idk can my i5-4670 even try to fight u guys :/

No problem dude, AMD is the way to go and with the new threadripper coming soon i'd save up and wait for that. I'm currently OCd to 4.1 just as a day to day due to work loads but tend to drop it down when gaming.

Takehito Morokuzu - July 28, 2018, 6:11 am

Intel always wins in gaming benchmarks. So if you're a gamer I'd get an 8700k.

Account of the Gods - July 28, 2018, 6:15 am

As far as the newest commercialized CPUs you are right, but think of it this way (with testing and personal experience, Numbers referenced for FPS are just an example of a difference)

Intel:

Run league of legends client (not gaming)

Run PUBG gaming full settings

Run 10 tabs on Chrome while generating wordlists and watching a youtube video.

A few notepads open.

Streaming/recording at 4k

Fresh install

- 120 FPS

INTEL: Just game = 160fps

AMD

Run league of legends client (not gaming)

Run PUBG gaming full settings

Run 50 tabs on Chrome while generating wordlists and watching a youtube video.

Run 50 firefox tabs open watching 2 videos in the background on 3 other monitors.

A few notepads open.

Streaming/recording at 8k

Hosting multiple websites using something like xampp

Running a few wordlists/dictionary attacks

A few Virtual machines running with shit running inside such as attacks/scans whatever doesn't matter.

Bluestacks loaded up with a game like pubg mobile.

Discord

Skype

VPN

Sony Vegas

Photoshop

Hasn't restarted in 6 months.

- 110-115 fps.

AMD just game = 140-150 fps

virus - July 28, 2018, 6:24 am

i7 3930k @ 4,5GHz

i5 8400

Zotac GTX 1080 Overclocked

256GB SSD

3TB HDD

2x8gb 2400mhz Overclocked to 2800mhz

This PC is great, it handles anything smoothly, videos render very fast, virtual machines run almost as quick as host OS, games run at ultra at high frame rates. Almost no complaints really, I just need a new monitor and case.

If you REALLY want to see a shit PC, have a look at my old one, or even worse, my grandad's.

My old laptop had a pentium 2020m, no gpu, 1x4gb + 1x2gb ram, 500gb 5400rpm hdd.

It barely runs any game newer than 10 years ago, overheats all the time, takes 10 minutes to boot and basically takes forever to do anything.

My grandad's laptop has a celeron n2840, 1x4gb ram so thats single channel, same spec hdd.

His laptop freezes while doing 3 things at once, not even intensive stuff either. Firefox + teamviewer + vlc open at the same time slows the laptop to a crawl. Oh, and games run at 10 frames per second below their lowest settings at 480p. So THATS a shit PC right there.

Mr. Robot - July 28, 2018, 8:41 am

I have to re-quote you now for that beautiful comparison of a laptop vs a cheap desktop.

1. Why are you comparing them?
2. Why are you comparing 2 of them?

3. Why are you trying to run firefox on a laptop.
4. Why are you trying to run firefox/teamviewer/vlc at the same time on a laptop.
5. What games are you playing that have their lowest setting as 480p that you are trying to run on a laptop with more than 10fps...

I'd almost put money on you trying to CPU mine on them too.

Holy shit, this is the greatest post I have read this year.

(Jul 28, 2018 08:56 AM)???? Wrote: [\[CITE\]](#) Pfft, theres not much to upgrade other than the cpu to an i7 8700k and the gpu to a 1080ti, and more storage and RAM.
... Not much to upgrade? I made this thread asking for people to compete with my build, you posted something that doesn't come close.

The entire thing needs an upgrade.
Not only that but you even said you need to upgrade the CPU/GPU/RAM/STORAGE - the only things you're missing is power supply and case my dude. 'NOT MUCH TO UPGRADE'

Takehito Morokuzu - July 28, 2018, 9:06 am

I mean its not a big upgrade.

And by upgrade ram and storage I mean add more.

I want to run firefox on the laptop because I want to browse the web (duh)

I want to multitask because I want to multitask.

Pretty much any game made in the last 10 years do not run well. Unless it was made in unity engine which runs on anything (it is designed for mobile)

I am comparing a high end PC with a "shit" PC. Sorry but if you think any coffee lake cpu is shit you seriously need to re-learn everything. Even the 8100 is good if you are not a power user and just a

casual user with something like a gtx 1050ti or lower.

And my desktop wasnt cheap. It's been upgraded multiple times. It used to have a fx 8350 and a 960 with ddr3 ram and less storage. Even if I still used that setup today I would be happy with it. The 960 still plays every game at 50+fps at 1080p.

Un-Named - July 28, 2018, 9:11 am

\$300 USD? What fucking drugs are you on?

The GPU alone, used, costs 450 USD. The ram is like 150. CPU is 200. Power supply is 100. Case is 30. Monitor is 100. Keyboard and mouse is 60. Storage together is 160 USD.

That's 1200+ USD!

Maybe you don't count the mouse, keyboard, and monitor, but it still costs over 1000 with a used GPU.

Un-Named - July 28, 2018, 9:35 am

(Jul 28, 2018 09:35 AM)Un-Named Wrote: [\[CITE\]](#) I think you should have allocated some of your funds into a better cpu.

nah i'm not planning on doin shit to it. money crunch rn.
Whats wrong with the 8400? It blasts everything, and it games very well. The i7 8700k is double the price for 20-30% more performance, and I'd have to buy a custom cooler for it. I don't have the money for that anyway, why get the i7 when the 8400 is perfectly fine for 90% of people?

Mr. Robot - July 28, 2018, 9:46 am

post your bench peasant

Takehito Morokuzu - July 28, 2018, 9:46 am

(Jul 28, 2018 09:37 AM)Mr. Robot Wrote: [\[CITE\]](#) i5 8400
Zotac GTX 1080 Overclocked
256GB SSD
3TB HDD
2x8gb 2400mhz Overclocked to 2800mhz
yes
i5 = 170 GBP = 222 usd
ssd = 70gbp = 91usd
hdd = 70gbp = 91usd
ram = 150gbp = 196usd
gpu = 395gbp = 517usd
case = 20gbp = 26usd (i know cheap case)
psu = 70gbp = 91usd
monitor = 70gbp = 91usd
mouse = 20gbp = 26usd
keyboard = 20gbp = 26usd

1055 GBP in total, that equals 1382 usd.

My other price was just an estimate, this is more accurate. And this is with a used gpu. Everything else brand new.

The b360m-k is a good motherboard for a CPU upgrade and RAM upgrades for a huge boost in performance then obviously the graphics card. If you wanted to upgrade in the future, your path would be

CPU

RAM

GPU

SIM-3107656 - October 28, 2018, 3:27 am

I am sure it is not me since I am using notebook and that puts me out of the game already.

Goku - October 28, 2018, 3:29 am

<https://www.userbenchmark.com/UserRun/11745539>

Yeah, just install another stick of RAM so that it runs in dual channel, and you'll be good.

Mr. Robot - December 9, 2018, 7:01 am

(Dec 9, 2018 07:55 AM)-yuno gasai- Wrote: [\[CITE\]](#) Yeah, just install another stick of RAM so that it runs in dual channel, and you'll be good.
Or read his results.

3200 ram running at 2133 on an GA-AB350.

I think he isn't running the newest bios update that supports 3200.

His GPU has a couple updates too.

Also unplug that USB.

Optimize the HDD by hitting the windows key, typing optimize and voila.

Do all of these steps - then disable all startup programs in task manager (and some services in msconfig) your PC will be running a lot better.

pmtobefriend - December 9, 2018, 7:06 am

yeah im too lazy to get it up to 3200 mhz, is there rllly a huge difference ?

Mr. Robot - December 9, 2018, 7:08 am

(Dec 9, 2018 08:06 AM)pmtobefriend Wrote: [\[CITE\]](#) yeah im too lazy to get it up to 3200 mhz, is there rllly a huge difference ?

I added some more info - and if you do it, you'll definitely be on the leaderboard for HF so i'd recommend it.

Still in the lead I see

pmtobefriend - December 9, 2018, 8:03 am

I'll do it in a few days most likely. I need to make bank online and get better specs !

Mr. Robot - December 12, 2018, 6:16 pm

Honestly, I ain't even mad at these results.
If it does what you want it to, enjoy it :)

If you're looking to upgrade, the Ryzen 5 3600 is a great choice, very fast CPU and priced cheaper than Intel's offerings.

(Apr 3, 2019 03:12 PM)Hopsin Wrote: [\[CITE\]](#) Great.
<https://www.userbenchmark.com/UserRun/15984025>

Using this laptop since 2013.
Do you still use it? Would you say the 850m is still any good?

Hopsin - September 30, 2019, 11:09 am

(Sep 30, 2019 08:39 AM)Takehito Morokuzu Wrote: [\[CITE\]](#) Do you still use it? Would you say the 850m is still any good?

Hi! Yes, I still use the same laptop! As for 850m, it really depends on what you want to use it for. ?

Fortunate - September 30, 2019, 11:14 am

I'm looking to purchase a new GPU soon. Let's benchmark my shit after that. I got a crappy used 1060 that overheats that I got for \$100 from my friend.

Bellum - September 30, 2019, 11:19 am

Holy fuck your pc is good, I've always thought AMD was a toaster cpu lmao.

Takehito Morokuzu - September 30, 2019, 11:20 am

(Sep 30, 2019 11:14 AM)Fortunate Wrote: [\[CITE\]](#) I'm looking to purchase a new GPU soon. Let's benchmark my Clay Davis after that. I got a crappy used 1060 that overheats that I got for \$100 from my friend.

Which 1060 is it?

Did you try to clean the card and replace thermal paste?
Are you overclocking?
How's your airflow in your case?

Blogger - September 30, 2019, 1:45 pm

This made me realize my laptop is a piece of shit.

Lindros - September 30, 2019, 1:48 pm

My old MSI GE600 could still play Skyrim real good.

SIM-4398566 - October 7, 2019, 3:01 pm

Definitely not me. I've just got the average gaming PC that can run games on ultra settings.

PR1V473 - October 7, 2019, 5:48 pm

(Jul 28, 2018 05:06 AM)Mr. Robot Wrote: [\[CITE\]](#) A question I have been asking for a while now, You pick the benching software - i'll run it.

I hope to see some of your results too - we can also tell you what upgrades you should get according to your results.

<http://www.userbenchmark.com/UserRun/9945765>

That's with some load issues for 4k on my hdd, underclocked ram and no OC on my gpu.
Will do a restart in a sec for the first time in a while and see how it holds with my ram boosted again.

UPDATE: 10/12/2018.

16gb RAM down but mobo now supports 3200mhz. Time to redo a bench -

1950x @ 1.25v - 4.0ghz OC

Gtx 1080ti @ Driver update from 398.11 to 416.94

Samsung 970 Evo NVMe @ Optimized with windows built in optimization

G.SKILL F4 DDR4 @ Increase from 2133mhz to 3200mhz but down 16gb or ram from 64gb to 48gb

// No GPU overclock during this run - and I can increase CPU to 4.1ghz comfortably if need be.
RAM still wont hit 3600 on the new bios version yet but soon. 970 evo isn't optimized as it's not a fresh drive.

<https://www.userbenchmark.com/UserRun/12788955>

That's one fast motherfucker you got there.

Mr. Robot - January 31, 2020, 6:34 pm

Interesting how results change quickly as new gear comes out.

V?rt - January 31, 2020, 6:55 pm

I would go run mine, but I have a laptop running an i5 and a 1050ti with 8gb of ram. Absolutely no point in my even trying, but it's interesting to see everybody elses
