Thread: [How to make a Random Pool Generator?](#)

VENI - July 31, 2018, 1:24 am

As the title says does anyone know how to or does anyone have the source of one. Need this for upcoming tool

thanks

GHO57 - July 31, 2018, 1:36 am

Sorry for asking, but what is Random Pool?

VENI - July 31, 2018, 1:40 am

Since you essentially just a want a random string use this:

You can also program it without LINQ if you want

Code private static Random random = new Random();

public static string RandomString(int length)

{

 const string chars =

 "ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz0123456789";

 return new string(Enumerable.Repeat(chars, length)

 .Select(s => s[random.Next(s.Length)]).ToArray());

}

Fill in the amount of random characters you want and you're done. Whenever someone hovers you can just call this method =)

If you want it in a grid like the picture you posted, just parse it. Not sure if this is what you wanted. If you have any questions feel free to ask.

can you please make me a example project of one with the grid thanks

It's better if you make it yourself for learning purpose as well. If you have any problems regarding the grid I can help! Think about how you are going to design your UML diagram.

Questions like:

[*] In what format do I want the grid?

[*] Where do I put the grid logic

[*] How am I going to make this interactive

Maybe sketch an UML first with entities, functions, vars and relationships. It will make you understand the case.

Vyxn - July 31, 2018, 3:46 am

It's work with GDI but if it isn't that necessary then don't. Just make a button saying "generate random" and it all good.

No one is going to do the whole thing for you for free.
