Alpha scanner is a new online antivirus scanner created in 2018 by AlphaCoder

Our philosophy is privacy. We don't keep any data about our users and the scanned files. The files you submit us are stored locally on offline virtual machines provided with the latest versions of the main antiviruses. They will scan it, and give their result without any mean communication with their servers.

That means, no one of your files are distributed to antiviruses.
We are using the powerful ScanMyBin API to perform scans.

We also care about users anonymity so, we don't ask any identity mark, as email or name to create an account. Absolutely no logs are stored about scans, sessions, ip's of users...

Are you thinking of adding image results?

Also, looks good.

Yes, it is in my plans.
But I don't know when i will add this.

Thanks

hetisjebaas - August 1, 2018, 6:41 am

Nice project. Will be saving this for later. Good luck!

luck!

Thanks, i will think about adding image results.

ImZero - August 1, 2018, 1:44 pm

Seen a couple of your projects and they all seem hq, keep it up op, and i will def be using this scanner, thanks!

Thanks to you man :)

I need to get more users, go scan guys ?

Uiqueblhats - August 3, 2018, 1:47 am

Posting here to come back later

whiter - August 3, 2018, 3:57 am

I will definitely check it promises to be interesting

PerfectStorm - August 3, 2018, 4:02 am

Also posting here to come back later

NYANxCAT - August 3, 2018, 4:44 am

HQ and easy to use. Thanks man

I allow myself to up my thread.

Everyone should use the 3 free scans :)

T0pi4ry - August 16, 2018, 2:12 am

Hi !

Thanks for this service :)

But, When i scanned a metasploit payload with my updated avast premium, i got this --->

<https://prnt.sc/kj926i>

But, in your scanner, i got this ---> <https://prnt.sc/kj926i>

Securifier - August 16, 2018, 11:41 pm

Humm... You posted the same screenshot twice.

As we use the ScanMyBin engine, you can check used versions at

<https://scanmybin.net/update.php>

I remind you that we provide Scantime scans. So if the payload got detected on runtime, we can't detect it.

Maybe use Run4Me, it is 0.99\$ per runtime scan.

Securifier - *August 30, 2018, 7:40 am*

Scanner was down for 2 days.

It is now UP !
