Thread: [Port Forward not working, can you see me connection refused?](#)

Mutiny - August 6, 2018, 1:31 am

Hello all,

I'm trying to port forward port 83 for my RAT. I've turned off my firewall completely, reset my modem etc. I'm portforwarding to my IPV4, correct? and it's not working canyouseeme.org just says connection refused. How do I fix this?

CyberStrike - August 6, 2018, 1:58 am

Do you have a listener listening to port 83 when checking with canyouseeme?

I'm an idiot, LOL. I wish I could delete this thread I feel stupid, didn't even change the listening port on the RAT :<

It's alright I've made a few simple mistakes from forgetting a ";" where source didn't compile and I couldn't figure out why to listening on the wrong port it happens, these threads actually help in letting others know to check the basics.

I wouldn't use your NAT for RATs. But that's not my problem.
