Thread: [Wps reaver error](#)

atrabotke - August 6, 2018, 11:44 pm

Hello when i trying to crack wps pin using reaver i getting error: WARNING: Receive timeout occurred. How to fix it? I will upload image. [imgur\(.\)com/a/idzVbJ6](#)

what i your adapter? make sure your card is on monitor mode and support packet injection. this can also occur due to weak signal(long distance from router). sometimes router WPS enabled but not configured may cause some trouble.

atrabotke - August 7, 2018, 12:46 am

Yesterday worked perfectly, but now not working. Wps is not locked. I`m using Tp-link TL-WN722N.

its a new patch for wps vulnerable routers buddy

Wps is temp locked means in wash its shows its not locked.Reb0ot the router can fix the problem since its temp locked

Also some times distance between router and your attack is important keep it small distance and the signal quality must be good for the attack
