Thread: [WPA/WPA2 PSK enabled - New Method Found](#)

Clon3 - August 7, 2018, 7:09 am

Hello to all reading this, I keep up on as much security news as I can, recently saw an article to a method I've seen a few times, but this is far better. Here is a link to it and will soon release a better tutorial on this. For now enjoy and try a DIY on yourself.

I would love to crack wpa2 quickly and easily, AP seems to block a ton these days. Changing the Mac address every block is tedious. Wps can't be found either just drives me crazy.

In my humble opinion ,Fluxion is the best tool ever .It still requires sort of social engineering ,but it's very tricky :D

Why go through all that hassle just for free wifi?
Any way to monetize this?

Just free Wifi.... Of course you can monetize this. I'm not going to say exactly how but think about what you can do if you have access to a locked private network... not saying I condone this I'm simply making a point.
