Thread: [\[Release\] File Name Leecher & Renamer !! -Spread like a pro. #Trendy GUI and Easy Use](#)

SpamHer0 - August 9, 2018, 5:24 am

This is my FIRST PROGRAM to release in public. Dont forget to suggest and comment. That keeps me going.

Little Back Ground.

About 2 weeks back, i have posted a thread here:-

<https://hackforums.net/showthread.php?tid=5864633>

To my surprise, i have got few PMs where guy asks for \$200 for bot like that. Thats insane. Iam not a programmer but i know its not worth \$200 either.

So i have decided:- To code myself all the programs what i need, based on what i want. Dont want to depend on others who are mostly kids or those "programmers" who charge exorbitant rates.

Final Result:- It took me 15days to learn basic coding and functions. Now iam doing all the automation bots myself. Almost everything i have is automated now. Everything custom coded for me.

Below is one of such thing. As i see, there is no such program from recent past and the last one available is from 2012 which is dead. So iam sharing this to public now. Enjoy.

COMMENT AND FEEDBACK

This is very valuable for me. I want to hear from all you guys about what improvements i can bring in. Also you can suggest me some custom bots which will be useful for public.

Today is a special day. After extensive coding, I am releasing Filename Leecher and Renamer. This is coded by me exclusively for forum members. Take time to read the entire thread and get a feel of it.

What exactly is this bot does?

The First tab of this bot is Name Leecher. Here, bot crawls through warez sites and leeches top 50 pages of trending softwares/games/music/movies (You can choose these). Once leeched, you can click and save the names into text file. Now this text file has ~1000 names which means that these are trending softwares on warez and people are downloading it in huge quantity in last 24hrs.

What is File Renamer?

The Second tab is file renamer. Here, you can select the names file you leeched in previous step and then choose your file (which is stub you want to spread/rename). The bot will automatically rename your stub with all the names in text file. So you have 1000 files with all different sames of trending warez. (Jackpot, if you know what you are doing).

What is Folder Renamer?

The third tab is folder renamer. It is same as above except that it copies and renames folders instead of files.

ScreenShots!!

Virus Scan:-

<https://www.virustotal.com/#/file-an...UzMzgxDQzNQ==>

This bot is coded from scratch and 100% clean. If there are any detections, they are mostly false positive or detection reads it as "bot" the programming which it is coded in. So its Safe to use as long as you download from this thread.

Still having any doubt?? Dont worry, if you are senior member, i am willing to share the source code and you can recompile and see the result. Welcome.

Download Link:-

<https://goo.gl/zDnCfu>

Password for the zip is written as comments after you open zip and also on download page(above link).

To Do:-

- 1.Make it Multi-Threading.
- 2.More type of options to choose.
- 3.Anything you suggest.

Comments and Feedback:-

Your valuable suggestions are necessary. Please comment here or inbox me. You can also PM me if you want a custom bot for free. I will do my best.

Upcoming Projects.

- 1.Email Account Generator/Creator (Yahoo,Outlook,Yandex,Protonmail,web.com ...etc)
- 2.Torrent Uploader and Spreader.(A bot that auto-upload torrents to popular torrent sites. Auto-spreading and Great features)

knifelt - February 11, 2019, 11:06 am

link dead... really needed this :D

MONSTER - November 7, 2019, 1:48 am

Bumping this please update your link is no longer valid thanks. ?
