Thread: [njRAT No clients are showing up.](#)

copop22 - August 10, 2018, 10:51 am

I portforwarded and used canyouseeme and it was fine, flood me works fine, but when I run the client on my own pc nothing shows up on njRAT... ?

Am I doing something wrong?

0w3rf10v - August 11, 2018, 4:52 am

Did you set IP address that your client connects to, to your actual IP address? If you set it to connect to local IP this may cause the problem

Exodus - August 11, 2018, 5:06 am

Try disabling your firewall or add an exception, also check that you are using the correct ip address.

NotAFed - August 11, 2018, 7:29 am

Chances are you're not using a dns for your clients to connect to. I'd suggest duckdns, even though its cancer, or no-ip, which is no better. They both get the job done. Don't use your own ip you found on ip chicken for your clients to connect to. It won't happen. Use a DNS.

Exodus - August 11, 2018, 7:57 am

He doesn't need to use a dns.

Eh, is it not preferred that he uses one though?

Some people prefer using a dns, but it's not necessary.

joleyman22 - August 11, 2018, 11:00 pm

Try building with the IP set to 127.0.0.1 to test on yourself. There are free RAT VM testing services here on HF. Just got to look around.

copop22 - August 17, 2018, 12:33 pm

I am using no-IP

(Aug 11, 2018 05:06 AM)Exodu\$ Wrote: [\[CITE\]](#) Try disabling your firewall or add an exception, also check that you are using the correct ip address.

I did that.

(Aug 11, 2018 11:00 PM)joleyman22 Wrote: [\[CITE\]](#) Try building with the IP set to 127.0.0.1 to test on yourself. There are free RAT VM testing services here on HF. Just got to look around.
Ok, this works. So I know its a IP issue right?
It doesnt work If i use no-ip or my IP so i have no idea whats happening

mekulous - August 19, 2018, 12:02 pm

Please, Can you give me a download link of the njrat. You can upload it on any upload site and drop a download link. thanks

Callmenothing - August 19, 2018, 12:39 pm

Is the port which you selected clients to connect to forwarded in router/vps?

yldmaker - August 19, 2018, 2:00 pm

its a common njrat problem,
its weird BUT in arabic forum where njrat developper launched it first time people say you should use old red no-ip software
some say change nj rat path, fix all register things using CCleaner and clean everything and a lot of weird solutions ...

the thing is me too i still have this njrat problem, my friend is using it too and it works fine but not for mee and for a lot of people
i use synet it works fine and it doesn't lose victims

my only problem is that i find crypters that only works with nj rat !!!!

Please, for the love of god, don't use no-ip. They are quite literally a known honeypot. They keep logs, work with AV companies and law enforcement agencies, and will happily suspend your host after a single abuse complaint, if not before. Even Microsoft played a major role in a massive crackdown on malicious use of their service a few years ago. Feel free to read up on that here:
<https://www.noip.com/blog/2014/07/10/microsoft-takedown-details-updates/>
AFIAK no-ip is now owned by Microsoft as well.

OP, do yourself a favor and buy either a proper DNS host, or a namecheap domain to set your DNS up through. There's plenty of tutorials around on HF.

Ok, Im not using this for anything illegal, just for monitoring my other computers so I dont even care if I use no-ip or not, but njrat doesnt work with my normal IP either.

Thanks for the advice about no-IP for the future though.

OR.....

A static IP#..... ?

Lets update this mother fucker... its Waaay outdated...

<https://hackforums.net/showthread.php?tid=4992638>

heh...

Sections 1.2 and 1.4 need to be totally reworked, good side section 2.* is pretty much static and wont change at all. ?

heh...I gotta do some brainstorming and figure out what kind of thread the section would most benefit from. I feel like even some people who want to learn don't read our long tutorials. :/

Think the largest problem Remote Administration in general covers such a broad aspect of IT overall.

I mean to actually be really successful, you gotta know your operating system inside and out, pretty much, you gotta know your networking, you gotta know the basics to client server communications, and more aspects.

Usually in field training your taught ONE of these things, and then call to others who are specialized in the other area.

That being said, its not surprising at all people who try to dive in to RATs get fucking lost to the point they are like sad little puppies.

Its confusing as fuck.. Honestly speaking if I did not have the like 20+ years of IT experience, Id be fucking lost picking IM or Orcus up for the first time wandering here for the first time. This is WHY I took to the section and still try to help, I know how confusing it can be, I sit back even to this day with some tech problems and even gotta go "What the flying FUCK is happening here?!?!" and Im certified to know whats up! LOL ? ?

But to my central point, being what I said and how large and broad RATting is, it might be more prudent to compile a mega thread of other tutorials covering each aspect.

Ive written others on port forwarding, TCP/IP Topologies and the OSI layers, which all tie together, but I've yet to get everything linked together for a central reference point...
