Thread: [20 VOUCH COPIES \[Hand Coded, Fully External, Legit, ESEA/FaceIT/ESL\] | CSGO |](#)

clutch-solution - August 10, 2018, 11:13 am

Hello. We are giving out 20 Vouch Copies. First Come- First Serve. Please join our main communicating platform to become a part of this journey!

Our cheats are aimed at providing the most legit feeling- they are mainly targeted to youtubers, twitch streamers and other social media related enthusiasts. Our cheat has bypassed the biggest waves that have recently happened. It is fully external, fully hand written. We plan on supporting upcoming, newer flagships as time moves on, such as PUBG.

Handcoded?

Kinda a bad choice of word to state that your cheat is not pasted imo

Why? We get many people that haven't tried out our product saying that our work is fake, It's pasted or It's just a recolored version of something freely available on github. That is not the case though; our cheat is written by us.

Yet you guys had problems with your aimbot on zoomed in weapons.

You probably fixed it but even then it's weird.

Not saying it's a paste but giving out vouch copies for a cheat that's esea and faceit proof according to what you're claiming is kinda weird.

The vouch copy isn't lifetime.. It's basically a trial version so you can see what you're getting. The zoomed in weapons bug is closely related to the fact that our cheat is external. We have no way of calling built-in functions due to the safety we aim to provide- we only read memory from the game. Your mouse cursor gets moved from point A to point B. Because the sensitivity for your aiming inside a scope is different, this becomes an issue when moving your cursor =)

From our testing, the cheat IS ESEA and Faceit proof, but with the most recent build(s), we are not so sure about what features (if any) are broken in the ESEA or Faceit servers.

He is right though.

Short or not, doesn't matter, one does not simply give away stuff like this.

It doesn't matter if it's 2 mins or 2 weeks, it's still a bad decision no matter what

Bad decision? Why? You use the vouch copy for your given time and then you can't use it anymore. Not a lot of rocket science to it.

To clarify, I am the coder from this project, the zoom in bug comes from our approach to implement the Aimbot. We don't write anything in the memory so we have to move the mouse which results in a different sense on zoomed in weapons. Just a thing which isn't implemented in the current state /

both staffs joined this month, site looks like ass.

"Undetected since 2011" meanwhile no-one ever probably heard about this cheat.

I call this another straight outta unknowncheats cheat/paste.

EDIT:

both of their domains are also registered since january.

all the videos also got uploaded just half year ago

Kenion - August 10, 2018, 4:31 pm

we sold undetected internal cheats for 1.6 and css, the external is complete new coded from scratch and will atleast take 1 year more to recieve any feature we plan. Anyway I do this for fun and if you believe that we paste, then show me a bsp parsing visual check which works on the new maps ;).. I didn't know that one of my supporters posted the thread her.

Edit: We had no domain, or website before

sorry for the bad vibe, but if you use bsp parsing as vis check your cheat is not faceit client undetected except you are working with a hypervisor which i highly doubt. maybe im wrong - then gj

Kenion - August 10, 2018, 4:40 pm

how should faceit detect a external visual check? The bsp data get streamed from a server which contains mdl / vvd / vtx and the only input it takes is player and enemy pos :)

PolarisGang - August 10, 2018, 5:20 pm

Not that I understand why you would need a vischeck with Facelt's serversided anti-cheat but even if Facelt monitored file handles to the csgo dir you can just store bsp data elsewhere. It's not the end of the world.

Kenion - August 10, 2018, 5:29 pm

our cheat works full external, so bsp parsing is the only way to get a good working visual check(I don't want any kind of shellcode injection), basicly the visual check is used by the aimbot.. So it won't track ppl behind walls :)

In addition every config and every information won't be on the local computer to prevent detection areas.

Kenion - August 10, 2018, 5:57 pm

who talks about server sided AC? They use client sided AC now, the vpk getting parsed on the server just to prevent any connection the the files or game. But anyway the project is not based on profit. Nobody need to join but we appreciate every alpha tester, which is complete free anyway so no need for hate speech :D

it's totally fine that you're giving out free/vouch copies.

the thing that i'm doing with this is called constructed criticism(which is not hate speech).

EDIT:

i'm being quite suspicious because nowadays so many pay2cheat providers are popping out of nowhere, claiming they are ud since x years and/or claiming to be proof on major leagues, yet being litterly gone when the first detection wave hits(doesn't matter on which ac) and/or after being cracked.

Kenion - August 10, 2018, 6:15 pm

Well the title is wrong sorry for that one of my supporters created the thread without telling me in first place, the current build which will be used for alpha testing won't support ANY league bypass. Obviously a league cheat / version isnt available for free (for good reasons). I searching a bit around on this platform, looks way better then this copy pasting community on UC. My start was a bit wonky here, but its getting better! Iam going to take a rest now see you later :)

Implying they don't use the server-sided AC at the same time? You delusional?

You arent undetected on faceit or esea stop saying otherwise. And uc may be a hub for many pasters but there are many good developers there which are far better than you. Dont lie about being undetected on an anticheat just because you dont get banned in 1 game.

Don't get provoked because people can't take you serious. You come here and link a website which reminds of a indian tech scam, or a middle-schoolers first website attempt. If you only spent 10 minutes on the website, why wouldn't you do the same to your cheat? Seems like you made it using GoDaddy's 1-click website builder.

You use misleading information in your title such as ESEA and FaceIT to grab attention.
You use the same misleading information on your website.
You call UC for a copy-pasting community, probably to discredit them for what you stole.
You have no presentations of your work.

You directly lie on your website about the cheat's existence time 2011? CSGO was not even released at that point. I think open beta was in late June 2012.

Certified payments Bitcoin? Yes it sounds smart, but how does one become certified to accept bitcoin payments, well no one does.

"Your cheat has bypassed the biggest waves" how so, when it never have existed before recently
"100% Undetected" makes it sound like you're coming from the crypter copy-pasting shit market
Your data protection statement page is in german? But your company address is somewhere in USA ?

I don't really see a problem with that, other than the fact that you might be salty and want to list more facts.
That really doesn't matter.. If you would do ANY research, you would already know that we are based in Germany.

Please continue your list! =)

Ok mr hand coded cheat. You can lie about that too while you are at it but can you tell me how does that make a difference? You give me a rizla vibe with your lying nature. Please post the last 3 digits of wavs steam so i can verify your claim or let me know of your alias. And the last time i talked to him, he didnt have anything special in his cheat and no motivation of making it better.

@pastor brother harry hardwick

wav is like that, gains and loses motivation often.

don't assume everyone is lying because your jealous you can only cop a 2000 user hack

2000 users and still the best.

Edit:i mistook you for the coder of the cheat being talked of in this thread thats why i made the comparision to platinum.

This has to be a joke... Please tell me nobody is using this... He can't even capitalise letters correctly, let alone write an ESEA cheat.

Just because you haven't heard of us, means our product is a rat? Skeet isn't a rat because it has a large userbase? Or maybe our product is a rat because virustotal says it's an unsafe file. Whatever

the case may be, you know that your argument is completely false ;)

I hope your .net malware goes a long way! =)
