Thread: [Why Http bot and private encrytion?](#)

bobsakino - August 16, 2018, 7:34 am

http bots is good. because it doesnt require high connection. So You can you use even on shared hosting.

So I plan to make my own http bot with private encrypt. because if you use public encrypt your bot would be easy to detected because it's shared.
i think http bots will have long lifetime.

Anyone here wants to be partnered with me?
I code. you spread? I give you 70% from total profit

?

I know some spreading methods I will direct you. contact me

ICQ:723530636

The http protocol is used not because it doesn't require a high bandwidth but because it's available in every kind of device, it's ports are open and usually not firewall'ed, as far as I know

bobsakino - August 16, 2018, 7:46 am

yea you're right but if you use TCP connection it's lot of pings so require lots of internet terrafic thats why you need over priced VPS
but with my HTTP bot I only ping a client once.

and YES we free from firewall HOORAY! :)

And also EASY TO SETUP even babies can set it up.

s4distic - August 16, 2018, 8:49 am

Yup,
If you need help spreading or coding PM me, I'm interested

narc0tic - August 16, 2018, 10:23 am

Lemme get this right.

You will spend your time and code a botnet, give advice on how to spread it to someone and give them 70% of the profits?

Whats in it for you?

Also, who the hell uses ICQ?

If I got lots of spreader. I can earn more right?

I provide few contacts not just ICQ. I support democracy Thanks.

As a rule ICQ is full of scammers, wouldn't use it if you actually want to be taken seriously. I'd suggest using XMPP, HF has their own server if you want to upgrade and get your own account on it.
