Thread: [Tesla agent review | \(the keylogger is "ok" , everything else sucks , dont buy it.\)](#)

kolet - August 18, 2018, 10:20 am

first off, if there is a review thread/special topic to do so, please move my topic to there.

i will start off, i've done a mistake by purchasing for 6 month and not for a smaller time, so if anyone want a stub hits me up on dm. i will create one for u. (as im stoping to use mine.)

so heres my review .

i will link below a link to imgur so u could see some screen shot by urself.

i will start with the support of TA, the only support u will receive is from the Discord channel.

however the support SUCKs and heres why.

they are 2 mods first one is ebony second guy is tizzybankz the admin aka "tesla agent" is not online most of the time, when he is , he is not active. (some times he answer questions of ppl but rarely)

those 2 dudes have no time for any1 , most of the time ebony threats to ban users for asking questions or pming him.

and he do ban ppl for asking legitimate questions like WTF. i would like to mention that the TA or the options in the agent (when u make the stub) is not documented that mean u got no idea what each selection do (except some obvious one).

in the imgur link i show a dude who raised some basic questions , and get yelled at . (for asking questions.).

the mods tells the users to search on google for a tesla agent question ? like why? isnt the discord suppose to be there for questions ? (i guess not)

the mods are aggressive AF , rudes and does not give a one damn about no one. ,

(imgur[.]com/Q6RwLrg) (not even mentioning that this guy bought a 1 year sub , and this is how he gets treated horrible)

this was the first reason why to not buy this . imgur[.]com/a/Lxs8WAt

second reason is, even if u give them some review about how to make it better (not me , but the same dude with the questions) they dont give a damn

in this guy review u will see all the reason WHY NOT to buy this keylogger. it sucks. it as nice features but it sucks. not stealthy , the stub get picked up imidiatly.

copy past from what the guy in the discord said

Quote:i am doing some QA at the moment and i might understand from where it comes from.

this is how the TA works, u create ur TA and save it as an name.exe right ? , cool now u run that name.exe it will create a startup registry (if u selected that option), it will make it as lexmark inc.. , now when running that name.exe it will spawn another exe think about that second exe as a child process (child exe) this child exe is super suspicious by its name (usual 3 chars) this child exe is in the %temp% forlder also the host process aka name.exe (TA) will be there if u select melt file option. it will change the name of the name.exe to tmp**.tmp i.imgur[.]com/kNSXkUx.png , now for the crash / part.

if u (or anything) kills the name.exe aka TA (if u kill it with any program even with task manager), it will die and wont backed up again, even if u selected persistence and process protect .

(side note if u used a crypt service and u kill the TA it will pop up a warfault crash that it could not

find or a problem accured with the child process)

however if the child .exe is being killed it will spawn again.

this crash loop happen when the lexmark.exe aka i.imgur[.]com/RJU0G5A.png aka TA (the "startup" option) cant find /run the child exe. THIS LEXMARK.exe is basicaly the TA i.imgur[.]com/Jb7kUJ6.png, its just being copied from where u ran it and put it on that appdata folder and change the name from name.exe (TA) to lexmark.exe and put it on hide.

hope u understand my shitty english .

this is for the crash .

now for other things.

if u open up wireshark it will bring up a pop up saying debug tool was detected

i.imgur[.]com/PZhJRaC.png like for real? ... what make it more obvious then that :D..

any how i wrote all this to make the TA better, i took my time and work on TA inspecting it and did some Q.A , so TA admin could do some updates and change some major stuff.

cheers

i also want to add

screenshots aint being encrypted and are saved in %appdata% in an hidden folder named ScreenShot

when pressing uninstall from the WebPanel it does not actualy uninstall it.. the TA and the child are still running as a process and are not being killed.

imgur[.]com/a/stfRGXM

and guess what this was their responds.

imgur[.]com/a/kJSbyVs

and here the chat back and forth imgur[.]com/a/kJSbyVs

those are the main reasons why u should not get tesla agent.

if u need a stub tell me i will make one for u. for free. (just tell me what option u want and ur webpanel link)

1, support sucks , mods are horrible ...

2, the stub get detected imidiatly

3, not all function works on the stub.

4, its not stealthy at all. (look at payknight post. explaining why its not)

5, it as some nice feature but those are not worth it.

6, some time the stub crashes

GL felas.

B FOR BADASS - August 18, 2018, 9:12 pm

I guess review should be in his thread...

0xfd - August 19, 2018, 12:31 pm

First of all I apologize to you. We generally have satisfied and happy customers. I am hard working for this. Sometimes I can not deal with customers because I'm too busy, and if my friends are rude, I will apologize to you for them. I can refund your money or contact me to help you set up. Agent Tesla working perfectly, I said always. If you don't know use it, that's not mean 'it's not working'.

Deal - August 19, 2018, 12:34 pm

It's your responsibility to check up on your employees as the CEO.

If you've been a part of this discord server, you can't possibly avoid seeing the way your mods approach your customers?

Props to you for refunding his money, but remember that certain business standards apply, even when selling tools. ?

0xfd - August 19, 2018, 12:37 pm

(Aug 19, 2018 12:34 PM)Vanadium Wrote: [\[CITE\]](#) It's your responsibility to check up on your employees as the CEO.

Ofcourse thats my reponsibility and I apologize to him. I will solve this problem. Thanks for your opinion. ?

If a user wants help related to hack is blocked. When I find out who is asking for help for hacking activities, I suspend their accounts like @payknight. Nobody answers him questions. Many users are doesn't read Discord rules.

kolet - August 19, 2018, 2:12 pm

well to be honest with u,
i have mix feelings.

one side of me want to screw u over and hand off TA to everyone that want it for free. because how ur mods were answering me and others of ur costumers. and since i paid for it i can do what ever i want with it.

and the other side of me want to be nice , since u answer nicely and even offered me a refund. which is pretty neat and nice of u.

let me ask u this , that will help me determine what i want to do.

looks at payknight comment and "QA" , have u implemented or change or made is abit more secured from what he have said ? or nothing has changed beside refud?

if u did some changes thanks to his review/QA ,what have u done ?

(i will have to add / edit / update what payknight said, about the folder itself. each "new" stub/agent that created will receive a new hidden folder name, and not lexmark..

ow , and there is no guideness on how to set a webpanel with out cpanel , which sucks. (so if u are on ubuntu u are screwd, unless u are doing it manualy and even then not sure it will work)
and also there is not documentation about the tool.

0xfd - August 19, 2018, 3:25 pm

payknight complained "Installation name". Installation name created by builder when building your server and this name randomly. Why? Because some AVs checking installation name or folder when your server is running (like Windows Defender). If it's detect same name with more virus files, recording your installation name to database. It will remove your file after signature updates. Do you know that? Or @payknight know that? I will add installation name option in the next update and clients will select own installation name.

Quote:if u open up wireshark it will bring up a pop up saying debug tool was detected
i.imgur[.]com/PZhJRaC.png like for real? ... what make it more obvious then that :D..
Agent Tesla builder have debug protection and you can not run wireshark, visualstudio, ollydbg, dnspy etc... This error not about your keylogger. It's coming from buidler ;)

Quote:... it will change the name of the name.exe to tmp**.tmp i.imgur[.]com/kNSXkUx.png , now for the crash / part... melt file moved your file to Temp folder and changed exe name to .tmp. If you don't use Add to startup, don't use melt because it will destroy your file.
Process protection working on Win7 because BSOD protection fixed after Win7.

If you want install WebPanel, I already uploaded a video tutorial([watch?v=UvmiJPXyl_0](https://www.youtube.com/watch?v=UvmiJPXyl_0)) to youtube. Or you can want help from me.

Dark Star - August 19, 2018, 3:28 pm

Good luck with figuring this out guys, posting to follow how the things are going. ?

nero360 - August 19, 2018, 5:24 pm

Someone recommended this to me, now am seeing these complains... Hmmmm!

kolet - August 21, 2018, 7:44 am

i wasn't asking on how to setup a webpanel, ur video with cpanel is pretty clear and straight forward , i said the builder was not documented , and it there is no guidness on how to setup it on ubuntu or any other platform (with out cpanel). it would be preferable if u could just update ur site with an "how to" thread . (for non cpanel user)

and i dont think payknight was complaning , he just did a QA pointing out some stuff to make ur stuff better.

anyhow i would like to receive a refund .

0xfd - August 21, 2018, 9:15 am

good or not good is an opinion every1 as theirs , i wrote mine.
i havent post any skype icq or jabber. if u want u can dm me in here.
TA as alot of downside but have nice features . as wroted before.

kolet - August 24, 2018, 1:46 am

just giving out an update.
i have received a refund.

thanks

DamienVC - August 24, 2018, 7:31 am

You need to understand that dealing with a huge userbase is a tedious job. Tesla may not be able to personally respond to everyone due to the influx of customers. I doubt the so-called "support staff" actually have access to ban licenses, maybe its just their fault, but you shouldn't blame the developer over it.

Every keylogger on HF uses the same methods, winhook SetWindowsHookEx, separate processes (known as process watchdog) for persistence, and so on. You can't really expect something that will feature a kernelmode driver that gathers input from the I/O stream at such low prices.

Also, there's over thousands of customers for Tesla as well, so FUD times are always an issue. Customers should resort to using private crypters with smaller userbases or private pay per crypt services for their uses rather than a public crypter/obfuscator accessible by thousands of users.

Edit: The developer even follows the same refund policy, which is lenient in my opinion. Other sellers won't even care about refunding you after purchasing.

0xfd - August 24, 2018, 10:03 am

Thanks Damien. Yes, supporters not have access to ban licenses. Sentinel Keylogger have a huge userbase. You can understand me, but the users can not understand. No problem, I did refund.

bijenu - August 24, 2018, 11:22 am

which is the best crypter for the agent tesla keylogger. please

kolet - August 24, 2018, 12:48 pm

maybe they dont about the licensing , but on the discord they do.

and they do banned (they did, not sure about now after this post and TA being more online)

ATodaMadre - November 1, 2018, 2:53 pm

I think I have the same problem, that I end up banned. I also bought for 6 months, the skype user "owned of Agent Tesla" helped me a lot at the beginning, I gave him access to the server and he was checking with me for a long time, but I couldnt make him walk. I always had a new problem, and he told me to update to php 7.2, I did that and it still doesnt work. da error en aval() "[php7:error] [pid 6372] PHP Fatal error: Uncaught Error: operator not supported for strings in " and I cant touch code because its with ioncube.

In discord the user "chipetboss" only answered a greeting and I have never seen it online again. Neither did agent_tesla nor ten_ten respond to me even though they are online they dont respond.

Try to enter the website and says "All registration stopped for now.

I dont know what to do, I dont consider myself such an inexperienced user to make it work, but it already exceeds my capabilities. Can someone help me? or could someone make it work?

kolet - November 1, 2018, 6:59 pm

wow,
well its an old post.

the owner did refund me after all.

for ur problem i think u should delete everything and reinstall from 0. (literally)
dont try to upgrade/update .
just install a fresh server.
its a shame that there is no guide or a tut to set it up with out (webpanel)

anyhow
u should look the latest notice

<https://www.agenttesla.com/notices>

they have stoped for the moment

ATodaMadre - November 4, 2018, 2:00 pm

thx, reinstall everything from scratch, 3 times xD, test old versions and the latest version of php, it still gives the same error.

tiyou - November 4, 2018, 2:08 pm

Hi AT,

Trying this for a couple of weeks now AT is in maintenance please refund...
