Thread: [google dork inurl doesn't work anymore?](#)

n31ght0 - August 20, 2018, 5:02 am

so back about a month ago google dork inurl doesn't work
for example if you type on google search this text

Code inurl:"women" site:wikipedia.org
will giving no results. Anyone know how to make this work again?

CyberStrike - August 20, 2018, 1:12 pm

Drop the quotes inurl means it's in the url you don't need quotes.

Two-Ton 21 - August 20, 2018, 1:43 pm

Quotes make it strict, you can make multiple queries at once. inurl: blah site:----, onpage:"text" site:-----.

but it's working before. yes i know double quotes mean exact result. i want the result show only url contain women exactly and no other if you drop the quotes sometimes for other query it results not only women but other text/url that isn't contain word you want included in the results as well.

Two-Ton 21 - August 20, 2018, 5:32 pm

I think you're looking for "intitle:".

Dropping the quotes works for inurl, it means that basically the word "women" (minus the quotes) is in the url. In any context then we would search "Women" site:wikipedia.org have you tried what I mentioned and checked the URL's ? Try it if the url has "women" then fine it would return those results. Read Untangling the Web it's very helpful.

It should be

PHP Code

<?php

Intext: example site:hackforums.net

Inurl is used to find extensions in a url

inurl:admin.php

You're right, dork with quotes means it "lock" keyword on google query. I also got some "error" when using quotes weeks ago
