Thread: [\[SOLVED\] Need help with cracking a java-run program \(bis\)](#)

ttb32394 - August 21, 2018, 9:05 am

Hello everyone

I recently asked you guys for someone who could help me with using a certain program.

I've now noticed that, alas, there's a functionality I cannot use within that program. So I have to use a later version.

In short:

we (here comes a period) tl/t-kzsUereQ1c

Here is an archive with the program in it. With the program, there is a licence file (pst4rt3r.1cs), which is in the folder System < lcs

This licence file belongs to a trial, which makes it possible to use the program for a limited time period.

There are 2 things that I would like to have changed: Removal of the time period limitation
Adding the possibility of saving (or rather, disabling the limitation of not being able to save)

The changes should be made to one of the 3 jar files in the main folder, but I'm not sure which one.

Could someone please help me with this (last) one? I won't report your comment if it's uber cryptic ?

Grazie mille!

TTB

[SOLVED]: Oh my, it seems to work if only I move the licence file from the earlier version to this version. Lol.
