Thread: [Paying Need Miner FUD Encrypted and runtime encrypted](#)

Elonion Muskronion - August 23, 2018, 6:16 pm

I'm gonna buy darkpope miner, I will need it FUD crypted, runtime as well

technical specifications of the miner that I have that will need to be crypted:

- It is coded in C++
- Anti-sleep: The PC will not sleep while the miner is running.
- Mutex: This guarantees only one instance of the miner will run per PC. If you execute the miner by mistake a second time on the same computer, the second instance of the miner will stop running automatically.
- Startup: Miner starts automatically every time the PC is restarted.
- Mines in memory (using heaven's gate to inject 64bit from 32bit executable). You get a 32bit executable file that is capable of injecting the 64bit mining engine to a 64bit windows process.
- Miner is injected to windows process to bypass firewalls.
- Startup registry key persistence: If user deletes the startup registry key, the miner will write a new startup key immediately.
- Executable file size: only 870 kb!
- Works on Windows XP to Windows 10 , Windows Server as well (32 and 64 bit).
- Miner stops by default if task manager is running to avoid user detection, then resumes after task manager is closed.
- Mining with 50% CPU when not idle and 100% CPU when idle to be less suspicious. Idle threshold time is 30 seconds.

let me know a price for this

dawdaw2 - August 23, 2018, 7:14 pm

I want to find a quality miner, where can i find darkpope?

Cød3ing - August 24, 2018, 12:58 am

Why would you want to stop more miners from executing on the machine? more miners means more money!

(Aug 23, 2018 06:16 PM)Elonion Muskronion Wrote: [\[CITE\]](#) - Miner stops by default if task manager is running to avoid user detection, then resumes after task manager is closed.

You must be talking about the pseudo-reflective task manager mitigator, prices start at \$1000 (USD)

The CPU neural learning heuristic system starts at \$800 (USD)

#1 having multiple copies of the miner means a slow pc, people would know something is up and end up factory resetting or something,

#2 Im not asking for the miner to be made, im asking for someone to fud crypt it for me

ratatouille - August 24, 2018, 3:46 am

i can provide you one in net, coded by me, you can encrypt it.

did you not read the thread, I already have one, the purpose of this thread is to get it encrypted ?

Why don't you just crypt your miner? Tons of crypters in sells HF section...
try limerat miner also might help.

Thanks for your reply, I don't want to pay the full price of the miner to only use it once, which is why im trying to pay someone to do one job for me.
