Thread: [platinum or interwebz](#)

Notacheater - August 26, 2018, 8:47 pm

Opinions please

I've used interwebz for 3 years until I stopped playing mid 2016

I never tried platinum and I was thinking of giving em a try

CatalystFTW - August 26, 2018, 11:03 pm

Platinum is a better choice. Iwebz has gone to shit recently.

VVAACC - August 27, 2018, 2:50 pm

platinum is decent legit cheat, but literally SHIT security

Astraxi - August 27, 2018, 2:51 pm

I would say Platinum since interwebz is kinda outdated tbh

On the other hand iwebz got their loader cracked a few months ago. Iwebz is just a cashgrab now. Way better cheats are there for cheaper.

cooldad22 - August 28, 2018, 1:26 am

interwebz for good aimbot

Notacheater - August 31, 2018, 1:50 pm

I was about to purchase iwebz but forums seems dead as fak and apparently they have this broad BSOD issue that hasn't been fixed

How's platinum in terms of aimbot?

I'm mainly looking for aim, no visuals or whatever

Most of the time I use psilent

edit: never mind lol just saw that platinum can ask for ID

I ain't about to post my info online to cheat in a video game

Any other suggestions for csgo cheats?

VVAACC - August 31, 2018, 3:32 pm

check out legitsense.cc , free weekend out there for testing

The interwebz bluescreen issue afaik only happens if you close csgo during injection as they don't properly handle that in their driver.

Platinumcheats announced, that they're closing soon, yesterday.

Alternatives you could try would be Satan5 or Novolinehook.

I'm just not up2date when it comes to legit cheats.

Other than that, the CSGO Detection Information Thread is a good place to look for a new cheat :)

proof that he is a multi acc please, do a trustscan or how its called here or else stfu, its against the ToS here to bring up shit.

i dont know what 'your post' was but probably some trashtalk about us so - haha random-hater owned. (if not ignore the last sentence).

and b2t: tbh both cheats aren't a good choice atm, platinum is closing and interwebz doesnt care about his cheat anymore and let it slowly die. id rather use some other cheat provider.

Looks like you feel attacked, good to know.

Due to his p2c mostly having a german Staffteam (I'd assume), the similarities in their use of the English language could just come from that

So I was right about the guy being linked to his provider

he started as a normal customer, made his way up to vip and then made his way up to staff within about 8 month without asslicking like everyone else tried (and failed), so yes, NOW he is linked to the provider. but his posts here in the past where are related from a non legitsense-perspective customer side view as he tested some other p2c's before he went to legitsense.

and no, i dont feel attacked, i feel your madness

I saw many people using platinum and they were kind of satisfied (talking about people who came from aimware :p) so yeah if u like how it looks go for it :)

VVAACC - September 1, 2018, 6:09 am

yeah platinum used to be a good legitcheat, but after latest vac updates, he got detected a lot, and now he officially announced that it's gonna closing in september, after all the actual subscriptions expires

Yes, as written above, i started as a customer and turned into a staff member after few months, if you remember i already said that at our first discussion on legitsense's thread

if u would have stopped your flames, your posts wouldn't get deleted anymore

SIM-3684208 - September 1, 2018, 8:47 am

Unity is a really good in between from both of these. It hasn't been detected in years and it has a really nice legit bot.

Notacheater - September 1, 2018, 12:58 pm

Thanks for all the suggestions guys.

I bought Satan5. It seems to have tons features for only 10 euros

CheatsHunter - September 3, 2018, 12:32 pm

platinum is better than interweb in my opinion :)

Bumping this to avoid making a second topic

I'm looking for a cheat that has in-game radar.

I don't mean a mini-radar ESP kinda thing

I'm talking about the real-deal, a radar that shows enemies in-game just as you would see them when one of your teammate spots them

Kindly let me know if anyone knows of a cheat that has this feature

edit: to clarify I had satan5 and it says it has radar but the cheat itself doesn't work for me

cheers!

I'm really sure alot of publics got that feature. The best go to is novolinehook, its just \$20. Aimware has a radar i believe, and so does Omniaim. I'm 100% sure novo, and ayyware does. Novo is 20€. I'm not too up to date when it comes to legit cheats, since i only use novo. Novo > all

Yeah I like it also very good cheat lots of features although one time I got banned for trash talking a guy I didn't know in comp beat him and then turned out he was staff so got a day ban from the site a few days later after he tracked my forum name through my cs account, pretty stupid but I enjoy the cheat a lot so its whatever.
