Thread: [Perl zombie IRC script](#)

Rediee216 - August 27, 2018, 7:49 am

Hi, i found some perl script that connects you to irc that you selected (by editing script).
You can remote do some things with it.

I tested it on my vps with comand "perl bot.pl" and it worked well. But i have one problem...
Is there any way to compile / or bind it to one exe file, so it will be easy to run on windows?

I tried perl2exe but with this way i have to have all .pm files with .exe :/

Can't post link, you can find script on giuhub: tlongren

you can't execute perl scripts on windows unless you install perl on the windows machine and execute the script. even then i'm not sure if it'll be compatible, so if you want to infect computers on a mass scale no you can't do it. however if you want an irc botnet using windows bots then there are bots that can do that.

Yep, I'm on hackforums
What an absolute classic this is

darksh33p - August 30, 2018, 8:41 am

lol need a dropper.. most perl bots infect linux server since perl is already install. and yes....need to

have all perl modules installed for perl script work.
