Thread: [Need help understanding differences between specialties in university.](#)

consrat - August 28, 2018, 8:53 am

Under the Engineering major, theres a speciality called 'Computer science & Engineering' word for word. I wanted to understand the difference between that and computer engineering itself. Which is better for my future.

ethellooking - September 23, 2020, 12:00 am

Computer science focuses mostly on troubleshooting issues on a software level. Expect to learn different programming languages, how to work with operating systems, and how to maintain databases. Computer engineering focuses on solving problems and designing hardware and software interfaces.

Just choose what's suitable with you!

I agree with you, It is good in Computer science to focuses mostly on troubleshooting issues, big data handling, and data security is also good to study in this field.
