Overall a decent guide but most of these methods I already knew about. I thought the social media

spreader would go more into detail on how to go about scripting your own bots.

Thank you for your feedback.

For the release version I didn't want to go overboard into that method until v2, so I can provide more automated programs for creating accounts and bypassing captchas for the social media platforms listed within the methods.

Have sent you a PM also.

what methods does this have that others didn't?

Every method I've seen come to HF, it's, "100% automatic Guranteed slaves or your money back" "quick simple and easy setup" 2 hours to setup, Never gets a slave, asks for refund and never gets it. Just a pure honest simple question, What does this have, that others did not.

First, we don't give your money back.

Second, this guide is all personal methods I've known and used, and have written and released this guide this year, so not to many know about them. Within the past I've written a guide called Instantly Spreading, so if you're asking, no there both completely different and not the same.

Yeah cause I have instantly spreading, and its not uh exactly, intact if you know what I mean.

I get it, Everyone wants to make money, But I mean, Its not like everyone can write up an ebook and profit. So I'm asking you for other than just your word. Visual proof of any of the guides that work.

When I first released Instantly Spreading, it was a success because it worked.

It's 2018 now, not 2015, and that guide is way outdated and I'm unsure whats going on with it these days as I have nothing to do with it anymore.

I can upload visual proof, however you do need to take into consideration times have changed and I'm not openly going to post my infections on a public forum. I get my customers to do that lol.

The difference between beginner and intermediate is that our beginner plan only provides 4 methods which are more easier to use.

Our Intermediate plan includes our beginner plan + another 4 methods which are more advanced. Intermediate also comes with lifetime updates to new releases.

Hello, that file size is the file size of the instruction document given after purchase telling you to contact me. That file size is not the actual file size of the product, as the product file size is a lot bigger. You will then be given the guide after you have made contact with me after purchase.

The intermediate package is 17 pages, and our beginner package is 9 pages. Everything is provided within the guide, along with step by step instructions, support and lifetime updates if you purchase the intermediate package.

Have never bought any of your products but if am asked, i can easily direct someone to you without fear.

You not only sell your products but also visit other threads helping people without directing them to your sales page.

You are one Seller i wish other sellers in HF can emulate.

Looking forward to buy this once i get the funds as every other method i have used failed me.

#skyline .. Good Luck with your sales.

Intermediate package would be best to make use of all the methods and sources. NanoCore isn't the best RAT, as it's basically just cracked and leaked. I'd recommend going with either quasar/lime rat/netwire.

Skyline, do the tools included in your 'methods' already include anything that would be included in the keylogger or RAT category? Anything that would be categorized under the HACK section of HF. Slightly confused about what 'all tools' means

The tools included are the tools needed to use the methods within the guide. Example, if a method requires a script / automated bot program then it is provided within the guide. I do not include any RATs/botnets/keyloggers within this guide. I only include what is needed to complete the setup and the use the methods.

Yes it includes targetting methods for certain countries. Will easily work with France.

We do not include a crypter to bypass AVs, you will need your own as these methods give higher

execution rates if you're FUD.

I have Questions.

#1: Can it send Mass emails like SMTP MAILING? like 20,000-30,000++

#2 Could it Mass text Bunch of people?

#3 How does the gaming spreading works? Could I get the ip address of the opposite team in league of legends for example?

1. Depends on the smtp service you're using.

2. Yes this can mass send text

3. I can't tell you how it works otherwise I'd be leaking the method.

1. Just this provide smtp service to spread alot of emails to how many people I want? I have some1 who does 20,000-30,000 emails a day service up to a month for 30\$ btc. Im just makking sure i get more for what the money is worth :P If you think Do you think the spreading method would be better than that guys service?

2. Sending mass texts to every1one even peoples phones i dont know about?

3. Alright is it possible to get ip addresses of people in game? I know I can track someones ip by setting up a link and tracking their ip address when they click it then ddos them thats so simple.

1. This provides the email sender tool, you will need to connect your own SMTP with it. This is worth the money considering Value deal comes with 40+ spreading methods.

2. It will send via email.

3. No we don't teach that. We only teach Spreading.
