If its proper encryption you cannot

blauskaerm - September 7, 2018, 6:27 am

Its really hard to tell, which it should be with encryption.

The strings are however not of the same length so its hard to tell if its a common encryption algorithm. The last six does however have the same size of 128 bits so it could mean a 128-bit block cipher like AES or a MD5 hash sum which has been salted.

Found this tread, it might help you:
