Thread: [\[VBS\] Brute Force Attack by Hackoo](#)

Hackoo - September 7, 2018, 4:35 am

Hi ?

This vbscript can calculate with a function the time spent to crack a password entered with InputBox.

The maximum length of the password to crack is set to 8 characters.

I let you discover it ! ?

Hackoo_BruteForce.vbs ([Click to View](#))

Remark: You must copy and paste this code and save it with the extension .vbs and not .bat then run it by double click.

If you like it, just rate it ! just all ! ?

Dotexe - September 7, 2018, 4:50 am

If it was written on either c++ or c# it could've been much more good :)

backpackid - September 10, 2018, 1:18 am

Nice one again Hackoo fantastic script!

?rescent - October 10, 2018, 7:09 pm

Thanks for another fantastic script!

Strayaa - October 10, 2018, 7:18 pm

Great job Hackoo! Keep up the good scripts :)

RFinn05 - October 18, 2018, 3:58 pm

niceeeeeee!!!!!!!!!!!!!!:))

I disagree.

The execution speed of VBS under Windows is comparable to any stand alone binary written in another language.

You also have the added benefit of NOT having to recompile the executable for any last minute changes or additions (a single script is worth a thousand lines of source code).

All that aside: You also have the humongous benefit of being able to run the VBS script across nearly every distro of Windows imaginable.
