Thread: [How to execute .jar file to .exe in netbeans](#)

cyber3 - September 8, 2018, 2:09 am

I'm new to java programming. So recently I built a simple scientific calculator using netbeans ide. Please, I need a guide on how to deploy the source .jar file into an executable Windows program to share to my buddies out there.

GenericSkid - September 8, 2018, 12:48 pm

You don't need to. You can run your jar with "java -jar MyJar.jar"

I meant how to convert my compile java project to run as a .exe extension.

I tried lauch4j but it gave me an error when I tried to run the program.

I tried lauch4j but it gave me an error when I tried to run the program.

Well, I thought it didn't make sense. Its a simple application being shared among friends, so why do this extra step?

Anyways what was the Launch4J error? Can't help ya without knowing specifics of the problem.
