I mean, you are using \$1 Hosting from <https://www.goterhosting.com/ptc-ksv4.php> where you also got the script from. Black and White make the website look like its from when the internet first came out and theirs errors all over the place (Text is over the navbars in some spots, Nothing is aligned properly.

imo: You just bought the script and threw it onto a domain without any changes.

-1/10 for being exposed, OP. At least customize the CSS a little bit.
