Thread: [Best paid service for skin changer, knife changer, and wallhacks?](#)

Godofdeathftw - September 9, 2018, 8:43 am

I'm looking for a cheat that has a good undetection streak, a skin changer, knife changer, and walls. I'd like the cheapest reasonable option (preferably with a lifetime payment plan). Still trying to pay as little as possible, but without sacrificing too much quality. Just a healthy in between.

I'm currently looking into Chromacheats which is \$10 for a month, and \$50 for lifetime. It seems that unityhacks is the best cheat, but they sadly only have a monthly payment, and no lifetime option. Which client do you guys recommend?

We might be your perfect option! Check us out. We have a pricing scheme that you might like as well.

1 Month Lite - \$7.95
3 Month Lite - \$19.95
6 Month Lite - \$29.95
-
1 Month Advance - \$11.95
3 Month Advance - \$29.95
6 Month Advance - \$39.95

I'd recommend LegacyAim. They were worth the price. Unity is good, but you have to go through a long process to inject. You need to disable your secure boot. 2 methods to pick from, one is by efi and the other is by disabling the patch guard. It also affects your performance due to its gui but only 10-20 fps, which isn't a big deal. If I were you, I'd go for legacy aim for sure

Edit: <https://high-minded.net/threads/chromacheats-security-analyse.57508/>

I'd avoid ChromaCheats. If you want something private PM me. Won't be that expensive

Thank you, that is good to know, although i still might end up going with Chromacheats because Legacyaim doesn't have a lifetime option :(

Do you have any other recommendations?

PingersAndMash - September 9, 2018, 6:44 pm

x22 100% like 50euro lifetime you may get banned every 6 months but meh, if u want a even lower risk ban legitex is a good one and tacocheats was pretty good also

Wouldn't really recommend anything.. as we may differ in what we like.
But If I was looking for something cheap and good then I would most likely go for satan5. It's pretty new, but got a solid crew behind them. Sen is the guy who made the framework and they also got Reaction as a coder - 10 euros monthly and 65 for a year. you wont get much more than that for a 10'er.

Now, again... we wont know if its gonna be undetected for a long time, no one knows and it has only been public for around 4-5 months now. But just looking at the team behind it, you are gonna expect it to last a long time.

I really don't care what you go with, but throwing money to yato and his paste would be a waste :P

Would you recommend tacocheats over Legacyaim in terms of Skinchanger and Wallhacks?
