Thread: [Mac Developer - Ad Inject inside Safari](#)

neroazzurro - September 13, 2018, 7:21 pm

Looking for someone who got a ways of injecting ads using JS inside Safari.

I did it by installing extension, but new MacOS update will not allow extensions anymore. Looking for new ideas

Hook the function that receives HTTP packets and intercept it.

You tried on new Mojave OS version? A lot will change on new OS.

If you are advanced with MacOS development pm me with skype/telegram.

Still looking, willing to pay good

neroazzurro - September 20, 2018, 7:50 am

Would be good if we got solution to inject without asking for admin rights
