Thread: [How to gain access to my 4G Vodafone LTE gateway's Home Page](#)

raghavsood999 - September 15, 2018, 7:02 pm

Hello, i just want to know if it's possible to gain access to the routers/modems gateway home page in order to perform port forwarding or set up DHCP, VPN or DNS yourself without calling Vodafone and asking them to forward a specific port themselves?

I have tried to enter the following ip's into my web browser url bar but nothing happens: 192.168.43.1 or 192.168.0.1 which are ip's for gateway of my Vodafone network.

I also know delphi and c++ so i can make my own vpn client and dns updaters to avoid getting spied on using open vpn client and DNS dynamic updater from afraid dns.

I feel that the coder can see what your up to so i will code my own. However i don't think that i can make my own vpn service and dns service without PHP web panel because Vodafone don't allow users manually configuring there settings that way. They want the customer to call them and ask for port forward. What i am trying to do here is somehow make my own web panel in PHP so that i have access to various nice tools to configure the gateway of my own phone.
