does this mention the users fast like the 1peprs or any indian hacker? haha

Cardinals - September 17, 2018, 9:48 pm

can public proxies be used for account creation? or do you need super hq private proxies.

Raymond Reddington - September 18, 2018, 3:26 am

Tested this bot myself and pretty impressed with the results. A good solid project right here.

It does but better switch an acc every few mentions unless you want to get flagged by Instagram's new anti-mention spam measures.

Can't guarantee what success rate would public proxies give but you'll get a few accs made as long as the proxies used haven't been tried on IG yet (i.e. wont be flagged by their systems)

Exactly, a project I can back & support as well.

You can use VMWare / Virtual Box. Honestly, its quite easy to set it up.

You can ask a private quote if you really need the function out asap.

It does scrape all hashtag users and hashtag likers (via mention module).

James Burnham - September 23, 2018, 5:32 am

Looks very interesting. Mention module is very useful. What exactly is "smart unfollow"? Unfollowing only ghost followers?

(Sep 23, 2018 05:32 AM)? Mr. Burnham ? Wrote: [\[CITE\]](#) Looks very interesting. Mention module is very useful. What exactly is "smart unfollow"? Unfollowing only ghost followers?

Unfollowing people who aren't following back. Useful for follow4follow campaigns and getting rid of those people on private accs (who follow req, wait for follow back and then unfollow).

levomi1998 - September 24, 2018, 6:58 am

If I am not getting a refund I will file a scam report.

Yeah, can confirm. Used this with several high value accs. The program itself is built on Instagram's private API so thats why nothing is an issue, especially for automation & page management.

Its doable with HQ proxies, i.e. StormProxies. Proxyless there'll obviously be a limit for 1-5 accounts at max. We've done it proxyless on several RDPs we've used for beta testing.
