Thread: [Does anyone know how to use kali linux 2018 version to crypt a rat stub from Quasar?](#)

galrov - September 17, 2018, 9:47 am

if so can you list them for me because i dont wanna use meterpreter lol

kaiketchum - October 11, 2018, 3:15 pm

Google is your friend, just check there

umm quasar can be run on linux.. did it in ubuntu using mono (I have dotnet installed as well) but stability was umm not there crashed on a build I didn't try running a VM and getting the connection (lazy). Try it on a VM OP worst case install virtual box on kali and use Windows?

Edit: .NET Reactor not exactly crypt but obfuscation .. I can tell you now de4dot has some issues deobfuscating some of it. Your mileage on Linux may vary of course. Of course there are solutions here on the forum.
