Port Forwarding Your Router - By ariton (With Pics)

So Lets Start:

Open cmd(open run and type cmd) if in Win Xp!

Type ipConfig

This should look like this:

[IMG]http://i35.[censored].com/4gn7lh.jpg[/IMG]

Enter the Defult Gateway in your webbrowser.

A page with your ROUTERS NAME will appear:

[IMG]http://i37.[censored].com/205b4md.jpg[/IMG]

After that, type your username and password:

Try these first:

Code user admin pass admin

user admin pass blank

user blank pass admin

user admin pass rootor type your password if your router has only password to type.

Go to portforwarding and select ports to portforward:

[IMG]http://i35.[censored].com/ehb1cn.jpg[/IMG]

!!!IMPORTANT!!!

If you have router like mine, you should port forward once for TCP and once for UDP.

Once you portforwarded, go [Here!](#) To test if your port is open.

If the port is not opened or not reachable:

1.Try refreshing the port tester page.

2.Try refreshing/applying the portforwarding page.

NOT WORKED?

Listen the following steps carefully:

1. Go to PortForward.com

2. Click Router List.

It will be shown like this:

[IMG]http://i36.[censored].com/2hrd4iq.jpg[/IMG]

3. Select your router type from the list.

In my example i will select DFL-200.[IMG]http://i37.[censored].com/1z6h1qa.jpg[/IMG]

Code To find your router type faster, press CTRL+F and type your routers name4.Click your Router Type.

5.Skip the advertisement and a page with applications(games, rats,download managers) will appear.

6. In my example i have selected Rainbow Six because i need to portforward for that:

[IMG]http://i34.[censored].com/rkzeop.jpg[/IMG]

Code If you like to porforward for Turkojan RAT, you will need to select Turkojan in the application list7. A site with guides on porforwarding will appear.

Heres an example pic of the guide:

[IMG]http://i34.[censored].com/mhsfex.jpg[/IMG][[/color]

Don't leech beacuse it tooked me too much time to make this post. You will be reported!

Flawless - August 4, 2010, 11:11 am

There are actually a couple of tutorials on this already but good tutorial im sure it will help out some people.

i2x - August 4, 2010, 11:17 am

As Flawless™ said, there's already quite a few tutorials similar to this. But hey, some people out there wont have seen this before.

BaMBuS - August 4, 2010, 1:38 pm

this is good tutorial but for XP... what about windows 7

ariton - August 4, 2010, 1:55 pm

You're wrong friend.This tutorial is for Win7.
Look at the WaterMark!

Karmas Guard - August 4, 2010, 3:34 pm

Good tutorial mate, I've tried this and it didnt work because my router is a pile of shit. :P

edwardj7337 - August 4, 2010, 5:29 pm

Everyone's Port Forwarding Tuts are all the same as the FIRST EVER tut on Port Forwarding... Only just a few are unique in which they are different. And only some including one that I made show one way to fix errors...

12KPR - August 5, 2010, 12:24 pm

This is on Windows 7,do you se on the top of the browser (transperancy)
Nice Tutorial my bro your allways the best

xms - August 26, 2010, 6:14 am

>Once you portforwarded, go Here! To test if your port is open.

Can you really do that?

I mean musn't there be a running program e.g. a rat that is listening on this port so that it is really opened?

I try the whole night to configure my port forwarding and ever get "Connection refused". Finally i did my tests with the Tool PortChecker on <http://portforward.com/help/portcheck.htm> and it works because it locally listen on this opened port like a running rat-client.

Please indicate in your tut that the windows firewall must be deactivated or the specific ports must be selected as exception (tcp and udp).

Now my port-forwarding works.

aritonarm@hotmail.com - i can help you with portforward!

WTF Hax0rz - August 26, 2010, 8:03 am

this will help people with tmobile :/ but can i still cybergate if i cant have both :/

ariton - August 26, 2010, 10:46 am

You can contact me at the following e-mail and i will help you out: aritonarm@hotmail.com !

Charmz - August 30, 2010, 4:58 am

Nice tutorial Ariton!

TOO FUCKING SHORT!

Fuzzyhacker - August 30, 2010, 7:27 am

Nice tutorial bro. I don't know why everyone seems to have such a hard time with port forwarding though. It's one of the simplest things that I ever did when first learning how to hack

ariton - August 30, 2010, 10:05 am

Glad i helped you, dear guys.

eightights - September 2, 2010, 10:38 pm

Very nice tutorial. But..

ariton - September 3, 2010, 8:57 am

(Sep 2, 2010 10:38 PM)eightights Wrote: [\[CITE\]](#) Very nice tutorial. But..

You can PM me if something is not good in there so i can help you myself.

Over 500 views and no only few "THANKS". That's weird and it got me 1hr to compile that!

eightights - September 3, 2010, 9:51 am

Over 500 views and no only few "THANKS". That's weird and it got me 1hr to compile that!

Thank you.

Can I use any of those ports which are already opened my by ISP's routers?

[\[IMG\]http://img824.imageshack.us/img824/5003/45850637.png\[IMG\]](http://img824.imageshack.us/img824/5003/45850637.png)

Uploaded with ImageShack.us

Then I won't have to bother for port forward.

Regards.

Do portforward man. That is useless.

ariton - September 28, 2010, 12:34 pm

Depressed for this thread too. It took me very long time to do and i don't think that i deserve this.

ariton - September 30, 2010, 3:06 am

Nobody likes my tutorial? Too many views, too little posts?

ariton - October 1, 2010, 3:17 am

Still only 15 comments? :S

ransome - October 27, 2010, 1:58 pm

i did the tut and its still saying that none of my ports are open

Thanks for the tut though

ariton - October 27, 2010, 2:23 pm

No problem. Glad it helped. Thanks for the comment.

Do0ks - October 27, 2010, 3:11 pm

great tut man, this really is 'beginner prof'

I never could get my router to show up when i typed in the default gateway.

somehow today, Shit worked

IM so Ecstatic!!

WOOO!!
