Thread: [\[AUTOBUY\] Siculus Logger - only \\$4.99 - Advanced UNICODE keylogger - currently FUD](#)

Siculus - September 18, 2018, 1:19 pm

DISCONTINUED. Read

<https://hackforums.net/showthread.php?tid=5886129&pid=57616153#pid57616153>

Note 1: the purchasing is fully automated. Once you pay, you automatically get your license and the tool

Note 2: as it's written from scratch, the keylogger is currently FUD. That being said, I do not plan on reFUDing it once it becomes detected

[For a limited amount of time, automatically get lifetime access for only \\$4.99](#)

Hey guys.

For the past few months, I've been working on a new C# / .NET keylogger. It's written from ground up, and it uses no third party code. Since I'm the actual developer, and not some reseller that knows nothing about code, you can expect quick fixes to any bugs you may find (if any)

Here are some screenshots of the keylogger builder:

[deleted]

Features:FTP delivery with configuration test

Log backup & upload interval configuration

Log and stub configuration encryption

Window title filter (eg.: only log keys directed to windows whose titles start with 'Note', windows that contain 'Power' anywhere in the title, etc.)

Single instance (mutex)

Start at boot

Installation to custom location + melt original executable

Optional automatic uninstallation

Built in FTP client for downloading and decrypting logs

Proper Unicode support (on-the-fly support for multiple input methods; It basically has great support for Chinese, Arabic, and other non-latin scripts)

Multi-threaded (every single key press is recorded, even when the upload process takes place)

Small stub size (currently ~50KiB, before compression / obfuscation, ~100KiB after obfuscation)

Low ram usage and no memory leaks (uses low level keyboard hooks unlike those basic GetAsyncKeyState keyloggers)

Written from scratch, unlike many keyloggers sold on this forum, that are basically reskins of older implementations.

Accepted payment methods:Bitcoin

Ethereum

[Click here to autobuy a lifetime license for only \\$4.99](#)

System requirements:recommended OS: Windows 10 x64 bit

.NET Framework 3.5 + 4.7.2 (builder)

.NET Framework 4.0 Client Profile (output)

Terms of service

Spoiler [\(Click to View\)](#)

All sales are final, no refunds will be given and you may not issue a charge-back

The ToS and the privacy policy, could change at any given time, without prior notice. Thus, its your obligation to regularly check it for changes

Not complying with the ToS, in its current, or future form, will get your account and / or license terminated without prior notice, and in some circumstances, I reserve the right to open scam reports against you, make the collected personal information public, or forward the collected personal information to your local authorities

The purchase comes with free limited support, but it could take up to 72 hours for the support

representative to answer your queries

Running the keylogger on computers you do not own, without consent from the rightful owner is strictly prohibited

Distributing any component of the system (builder, builder output (keylogger) DLLs, documentation and any other files received after purchasing or generated by any component (including keylogs)) is strictly prohibited. This includes, but is not limited to: uploading components to public file hosts (Dropbox, Google Drive, Mediafire, etc.), uploading components to "virus scanning / file analysis" services of any kind (VirusTotal, NoDistribute, SpyralScanner), reselling components

Tampering with any component of the system, in any given form (disassembling, debugging, cracking, encrypting, obfuscating, packet sniffing, spamming, etc.) is strictly prohibited

The team behind this system, may not be held liable for any damages caused by the direct and indirect use of the system. This includes, but is not limited to: data loss, material loss, system crashes

Privacy policy

Spoiler ([Click to View](#))

When you register an account / license through the system, a summary of your system's configuration is collected

Every time you use system, your IP address is collected

Every time you build a keylogger, your license information and system summary is included in the output executable

Asking for people to bump my thread doesn't automatically render me, or the tool I sell, shady. Thanks for bumping though

karlabt4 - September 19, 2018, 2:45 am

Bumping this. Coming back to it, Interested in this keylogger.

Siculus - September 19, 2018, 6:07 am

Yes, I blocked you, because you were wasting my time. Also, thanks for down-rating my thread.

Here's the story for everybody else:

He contacted me because he wanted a partnership. We agreed that he'd resell my tool via PayPal, as I can only take crypto. After many minutes of discussions, we both agreed on how we'd do things, and he requested a trial license to my tool. I agreed to send him the license and a download link, after he'd prove to me that all of the required dependencies are installed on his test machine (.net framework 3.5, 4.7.2 - master and 4.0 - sever). I sent him a document with the installation instructions, and I waited for him to confirm the installation. After a few minutes, he came back to me, suggesting that he installed the dependencies. I requested proof of that (a simple bloody screenshot of a tool that shows if .net framework is successfully installed), but he refused to send me the screenshot, mostly because he probably was too fucking lazy to read the installation instructions I've sent to him. Thus, I blocked him on discord and on HF, because he wasted my time. He's a lazy, secretive, rude and unreliable user, and I don't recommend doing any partnerships with him.

Siculus - September 19, 2018, 6:26 am

You mean, lying your HF buddies? You're full of shit. A lazy ass leecher

To everybody else:

Since I started this thread, I made a grand total of 0 (zero) sales. I've decided to discontinue this product. I might sell the full source code for the right price
