Thread: [Quant Network \(QNT\) - Low marketcap with huge potential](#)

d4rkj4y - September 18, 2018, 4:33 pm

Hello guys, it has been a while since my last post where I informed hackforums about Waltonchain, [you can check that thread out here](#)

Now, Quant Network (QNT), the TLDR details:

- Current price \$1.10, current marketcap: \$11,071,385
- Recent coin burn. Total supply dropped from 45,467,000 to 14,610,350 (9,964,259 freely circulating) which gives this project a current marketcap of \$16,071,385 (not yet updated on coinmarketcap).
- SDK coming out late September. They work on private repositories on their github due to proprietary code.
- In talks with new exchanges currently which we will see in the coming weeks.
- Aims to be a usable bridge between corporations easily integrating blockchain technology without destroying the infrastructure.
- [The CEO has created the ISO standard for blockchain technologies](#)
- CEO has many connections with major companies and governments.

[Video: <https://www.youtube.com/watch?v=X5sNBxbFa1U>]

Project overview:

Quant Network has set out to connect networks and facilitate the development of multi-chain applications. They seek to do this through blockchain to blockchain communication, connecting existing networks and internet (TCP/IP) to blockchain, and building applications across multiple ledgers.

Its product, "Overledger" was developed to address the aforementioned three issues with "multi-chain applications" (MApps), which will allow developers to move across technologies when required. Quant Network aims to make it simple for its clients to seamlessly integrate its interoperable processes and mechanisms with the Overledger platform.

The team developed its platform and protocols with both public and private enterprise in mind. Its four main sectors of focus will be financial services, healthcare, supply chain, and government. Additionally, Quant Ledger has sought to meet internal and external security needs of its enterprise clients, as well as comply with regulatory policy.

The CEO has over 20 years experience in technology and security; the Chief Strategist an experienced digital economist; and the CTO with experience in information, cybersecurity, and AI.

Blockchain addresses will be formed in the platform as "Quant IP," which will be used to establish an 'Internet of Trust' through providing licenses to manufacturers and internet providers/blockchain providers. Its token, QNT, is an ERC-20 standard and will be used to facilitate payments and as an identity mechanism. Quant Network envisions token keys to "authenticate the user and authorize the use of aspects of the network and underlying blockchains."

The team will be releasing critical components of Overledger in the upcoming months. The MApps store is tentatively scheduled to open in Q2 of 2019, which will act as a central hub for developers to share their MApps.

It appears as if the Quant Network folks are well-versed in a variety of industries, and understand the need of existing public and private enterprise to easily integrate their existing processes into any particular blockchain. Overledger's MApps will create products that allow for enterprise users to operate multiple processes across multiple platforms from one source. If the world does shift to 10% of global GDP built on blockchain applications (cited in whitepaper), then Quant Ledger is at the forefront of creating a service that allows for integration of blockchain into current enterprise architecture.

We took a look into Gilbert Verdian's background, and it is quite extensive. Gilbert holds a masters degree in business administration, and has a career in technology safety, government, and business dating back to 1998, where he began as a consultant at Ernst & Young. After a decade of jumping between Ernst & Young and CSC, with promotions in each leap, he served as Deputy CTO for a few years at Her Majesty's Treasury of Britain. Following a role in HM Treasury, Gilbert served in a variety of security roles at HSBC, BP, and Government of New South Wales.

source - copied and from some Telegram chat.

WARNING - DO NOT BUY QNT FROM FATBTC the only usable exchange to purchase QNT from is IDEX. Just follow the instructions, download metamask and deposit ethereum.

Spoiler [\(Click to View\)](#)

Do your research, don't ask me stupid questions, and good luck.

shreder - September 18, 2018, 9:57 pm

Quant is relying heavily on CEOs connections I cant distinguish If quants value is based on amount of CEO connections or actual utility.

d4rkj4y - September 18, 2018, 10:33 pm

Looking at it neutrally I would say a mix of both at this stage. In terms of it being an ERC20 token currently, they are working on their blockchain.

So good (so far true to their word) leadership and an actual product with a use case is a good sign

Up a juicy 30% today, this is still very low marketcap for what the project could be capable of if all goes well.

Overledger aims to provide an agnostic multi-chain operating system that allows end-to-end communication across multiple Blockchains & networks. Creating Blockchain ISO standards and development teams willing to work with existing enterprise infrastructure, Overledger is aiming to set the stage for future Blockchain specifications. Overledger's industry experienced team focuses on being able to construct useful networks without significant overhauls to Blockchain infrastructure. Since Overledger is an Operating system that sits on top of Blockchains, this is done with the

absence of middle-ware and the need for compromising current technologies.

Overledger / Quant Network Patent-pending blockchain Operating System (OS)
Agnostic Platform Cross Blockchain communication
Connects to legacy networks and enterprise systems Open source
Creation of Blockchain ISO standard — TC307

This literally doesn't even make sense. You go too say you do research but then go too say you don't invest in ICO's. If you do proper research there's very little risk when investing in ICO's. (Scam wise)

trololol95 - September 22, 2018, 8:10 am

ICO scam are very good and you can not see what is a scam and what is real one. Identity of persons are used as teammembers, Perfect Idea's, very good roadmap and in the end you find out it is a scam.

I say the scams are very good and are hardly distinguish from the real ICO. If you disagree you need to check CS (credits). Many people believes it is a scam. But other people keep investing.

If someone invests in an ICO and gets scammed I won't say they deserve to be scammed because no one does but they must be fucking idiotic.

You have no argument, and it just seems like you're throwing shit and seeing what sticks.

I mean seriously, this team is extremely compliant with SEC standards (if you did your research you would see this), however I highly doubt you know what that means. Case being that they held off being listed on various exchanges until they were compliant with all regulations, that in comparison to many other shitcoins in the crypto graveyard

Because I was in discussion with someone and we got off topic.

d4rkj4y - October 22, 2018, 3:21 pm

Quant Network Joins the Global Legal Blockchain Consortium

London (25 September, 2018)— Quant Network — an innovative, global blockchain start-up — today announced its inclusion in the Global Legal Blockchain Consortium (GLBC), composed of more than 100 large companies, law firms, software companies and universities focused on developing standards and compliance guidelines for blockchain and smart contract technologies in the business of law.

The Quant Network team have established themselves as a leading authority on the development of standards and regulation for blockchain with the Quant Network CEO and Founder, Gilbert Verdian, having also founded the Global ISO Standard TC307 in 2015. The ISO Standard TC307 has brought together 47 countries to promote the harmonisation of this technology and its adoption.

“We have spent over twenty years protecting people, governments and regulated industries from the risk of cyber security threats, operational failures and malicious actors,” explained Gilbert Verdian.

“Since then we have been at the forefront of the advancement of blockchain technology and are excited to be able to bring those invaluable insights to the GLBC and help shape this rapidly changing landscape.”

“We are excited to see that Quant Network is participating in the GLBC,” said Pierson Grider, Global Organiser, GLBC. “Their involvement with the Global ISO Standard TC307 will benefit the GLBC community in helping set standards in blockchain for the legal industry.”

The GLBC is a global network of legal industry stakeholders that aims to enhance security, governance and viability of blockchain and smart contract technologies to complement the way the legal industry interacts with them for the benefit of clients, in-house attorneys, legal service providers and the legal industry at large.

https://medium.com/@quant_network/quant-network-joins-the-global-legal-blockchain-consortium-c641b62a6bbe

Up a healthy 40% today.

Also:

Quote: Today, the Quant team created a Decentralized Amazon that is simultaneously running across Ethereum, Bitcoin and Ripple. Part of our Overledger roadmap, we're releasing example Multi-chain applications (MAApps).

It's a powerful example of what is possible with Overledger, making use of the different blockchains, the technology and features of the different chains and simultaneously connecting them to combine siloed data, value and technical features.

We've taken payment from any of the 3 chains, connected ownership data, uploaded as an image, stored on Bitcoin, with Registration data on Ripple and Insurance data which is on Ethereum.

A true Enterprise use case which combines the features and data on disparate blockchains to deliver new products and solutions to customers.

The possibilities are endless. We can't wait to see what you'll build with Overledger!
#BuildtheFuture #blockchain #innovation

Decentralized Amazon powered by Overledger

As of 23/10/2018, price is \$2.27 USD, I hope you guys bought.

However if not then it is in my opinion a solid investment, still a very low marketcap on an obscure exchange.

d4rkj4y - February 8, 2019, 5:10 pm

Just broke through to the top 100 on coinmarketcap after 50% price rise past few days.
Added to Bittrex exchange as BTC pairing.
Binance application pending.
Future announcements coming.

Still balls deep in quant as it easily has the potential to be a top 5 project. Thought I'd bump this thread and see if anyone else is interested.

Ice - February 9, 2019, 2:45 am

Put around 5% of my portfolio into this when I saw your thread and did a little research, wouldn't of seen this gem without you, thanks!

3af4aha567aja - February 18, 2019, 9:39 am

Is it worth investing right now? The whole market seems fairly volatile and a lot of people are saying BTC is going to drop again -- if so, would Quant go with it? Is it better to wait?

d4rkj4y - February 18, 2019, 9:41 pm

(Feb 18, 2019 10:39 AM)3af4aha567aja Wrote: [\[CITE\]](#) Is it worth investing right now? The whole market seems fairly volatile and a lot of people are saying BTC is going to drop again -- if so, would Quant go with it? Is it better to wait?

Try to buy around 0.024

3af4aha567aja - February 19, 2019, 6:10 am

(Feb 18, 2019 10:41 PM)d4rkj4y Wrote: [\[CITE\]](#) Try to buy around 0.024
To clarify, do you mean 0.024 ETH?

d4rkj4y - February 19, 2019, 9:34 am

(Feb 19, 2019 07:10 AM)3af4aha567aja Wrote: [\[CITE\]](#) To clarify, do you mean 0.024 ETH?
Yeah man, couldn't be bitcoin ;)

xShadowAlk - April 19, 2019, 9:16 am

Is there a good reason for price drop or is this a super juicy buy in opportunity?

Edit: Also I know you said don't use fatbtc and I'm guessing it's because it's a foreign exchange requiring an id. Is it okay to use hotbit though?
